Mitchener, 2021-07-28 On November 20 1943 the U S military invaded the Tarawa Atoll of the Gilbert Islands as part of the first American offensive in the Central Pacific region during World War II This invasion marked more than one first as it was also the introductory test of a doctrine developed during the interwar years to address problems inherent in situations in which amphibious assaults required support by naval gunfire rather than land based artillery In this detailed study Donald K Mitchener documents and analyzes the prewar development of this doctrine as well as its application and evolution between the years 1943 1945 The historical consensus is that the test at Tawara was successful and increased the efficiency with which U S forces were able to apply the doctrine in the Pacific theater for the remainder of the Second World War Mitchener challenges this view arguing that the reality was much more complex He reveals that strategic concerns often took precedence over the lessons learned in the initial engagement and that naval planners failure to stay up to date with the latest doctrinal developments and applications sometimes led them to ignore these lessons altogether U S Naval Gunfire Support in the Pacific War presents an important analysis that highlights the human cost of misinterpreting strategic and tactical realities Journalist 3 & 2 United States.

Naval Training Command,1973 **Naval Firepower** Norman Friedman,2013-08-20 An in depth history of naval battleship firepower from before World War I to the end of World War II by America s leading naval analyst For more than half a century the big gun was the arbiter of naval power but it was useless if it could not hit the target fast and hard enough to prevent the enemy doing the same Because the naval gun platform was itself in motion finding a firing solution was a significant problem exacerbated when gun sizes increased fighting ranges lengthened and seemingly minor issues like wind velocity had to be considered To speed up the process and eliminate human error navies sought a reliable mechanical calculation This heavily illustrated book outlines for the first time in layman s terms the complex subject of fire control as it dominated battleship and cruiser design from before World War I to the end of the dreadnought era Covering the directors range finders and electro mechanical computers invented to solve the problems author Norman Friedman explains not only how the technology shaped and was shaped by the tactics involved but also analyzes their effectiveness in battle His examination of the controversy surrounding Jutland and the relative merits of competing fire control systems draws surprising conclusions He also reassesses many other major gun actions such as the battles between the Royal Navy and the Bismarck and the U S Navy actions in the Solomons and at Surigao Strait All major navies are covered and the story concludes at the end of World War II with the impact of radar **Bureau of Naval Personnel Information Bulletin** ,1944

Battleship, Battlegroup-cruiser Destroyer Group Homeporting, San Francisco Bay ,1987 *The Royal Navy and the Capital Ship in the Interwar Period* Joseph Moretz,2012-12-06 Joseph Moretz s innovative work focuses on what battleships actually did in the inter war years and what its designed war role in fact was In doing so the book tells us much about British naval policy and planning of the time Drawing heavily on official Admiralty records and private papers of leading officers the author examines the navy s operational experience and the evolution of its tactical doctrine during the interwar period He argues that operational experience combined with assumptions about the nature of a future naval war were more important in keeping the battleship afloat than conservatism in Navy
