Ncep Atp Guidelines:

Cardiologist Adherence to NCEP ATP III LDL-C Guidelines in Patients with Known Coronary Heart Disease

Terri L. Booth, 2007 Coronary heart disease CHD causes more deaths in the United States than any other. Those with known CHD are at increased risk for future coronary events and high levels of low density lipoprotein cholesterol LDL C have been proven to hasten this process. Attainment of the National Cholesterol Education Program NCEP target LDL C levels is a difficult undertaking. The purpose of this retrospective descriptive study was to assess adherence to NCEP Adult Treatment Panel III ATP III LDL C guidelines of cardiologists as a whole and independently. Demographic variables were examined. This data collection and interpretation provides valuable information to develop strategies for improved attainment of these guidelines. The Quality Assurance Model Using Research was the framework of this study. Results indicated excellent adherence: 93.8% to NCEP ATP III LDL C guideline in patients at high risk for CHD and fair 40.2% adherence to NCEP ATP III LDL C guideline in very high risk for CHD patients.
