Lactivism Courtney Jung, 2015-11-24 Breastfeeding has become

a moral imperative in 21st century America Once upon a time this moral imperative made sense Breastfeeding was believed to bring multiple health benefits including increased resistance to many chronic and even fatal diseases protection against Sudden Infant Death Syndrome SIDS improved intelligence and countless immunities The irony now however is that breastfeeding continues to gain moral force just as scientists are showing that its benefits have been greatly exaggerated In 2012 the American Academy of Pediatrics and the Center for Disease Control and Prevention declared the failure to breastfeed a public health issue thus placing bottle feeding on par with smoking obesity and unsafe sex Recently politicians too have launched highly visible breastfeeding initiatives such as former New York Mayor Michael Bloomberg s well publicized Latch On campaign And meanwhile women who don t breastfeed their babies have found themselves with a lot of explaining to do Physicians public health officials and other mothers are pressuring them to breastfeed even though the best science shows that the advantages of doing so are minimal at best What is going on In Lactivism Courtney Jung offers the most deeply researched and far reaching critique of the breastfeeding imperative to date Drawing on a wide range of evidence from rigorously peer reviewed scientific research to interviews with physicians politicians business interests activists social workers and mothers from across the social and political spectrum Jung presents an eye opening account of how a practice that began as an alternative to Big Business has become Big Business itself The Nursing Mother's Companion Kathleen Huggins,2007-04-06 Huggins has extensively revised and updated this 25th anniversary edition of her accessible and authoritative guide to breastfeeding to equip nursing mothers with all the information they need to overcome difficulties and nurse their babies successfully **Breastfeeding** Melissa Macdonald,Tatyanna Wright,2011-07-30 Breastfeeding Real Moms Tell You How is a practical warm book with advice and stories from Moms who ve been there to help get your journey underway PREGNANCY BIRTH MAGAZINE BREASTFEEDING REAL MOMS TELL YOU HOW is the number one parenting guide in the Southern hemisphere already helping thousands of mothers through sharing experiences with breast and bottle feeding in Australia New Zealand Singapore and throughout the Far East Now with even more features like video to guide you and the ability to purchase products tried and tested by real moms This book tells you all you ll need to know to feed your baby breast and bottle plus read real stories from moms who could nurse and moms who couldn t It is is a no guilt no pressure approach with realistic advice for the modern mom Design and Development of a Manual Breast Pump Nur Atiqah Ramlan,2010 This thesis deals with design and development of a manual breast pump with an ergonomic approach This project is the further study of the previous project which is the preliminary design of the manual breast pump The purpose of this study is to prevent the musculoskeletal disorder problems among mothers who expressed the breast milk using manual breast pump The objectives of this study is to design a manual breast pump with ergonomics approach using Solidworks to make a prototype of the designed manual breast pump using Rapid Prototyping machine and to validate the designed manual breast pump using simulation process and manual calculation The scope of this project is that

the developed manual breast pump is only a prototype and is not readily functional as a commercial product While the validations of the manual breast pump through the simulation software is considered precise The strategy of validation of finite element analysis was developed for this project The finite element analysis was then performed using ALGOR and the bottle part of the design was analyzed using the static stress with linear material model The other part of the design which is the pressure pump was also manually calculated The obtained results indicate that the maximum value of the result shows in the bottom of the bottle due to the surface boundary condition The manual calculation of the pressure pump shows that the design just can produce the maximum pressure of about 4 000 Pa While a good manual breast pump should produce at least about 2 000 Pa However the area is not suitable to be reducing in a great number due to the ergonomics condition
