

RESPIRATORY VIRUS DETECTION REPORT

December 4 to December 10, 2022
[Surveillance Week 2022-49]

Please note that the Respiratory Virus Detection Surveillance System (RVDSS) is a sentinel laboratory surveillance system that does not capture all respiratory virus testing performed in Canada; differences may exist between the data presented in this report and provincial/territorial epidemiological reports. SARS-CoV-2 laboratory data is included in this report to facilitate the comparison of positivity with other respiratory viruses. Interpretation should be made with caution as testing practices differ among viruses.

For additional SARS-CoV-2 surveillance information, please refer to the [COVID-19 epidemiology update](#).

Overall Summary

In week 49 (week ending December 10, 2022) in Canada, participating RVDSS laboratories reported 11,793 detections of SARS-CoV-2 from 93,704 tests (12.6% positive). Among non-SARS-CoV-2 respiratory viruses, where test volumes are lower (range of 10,684 to 43,589 tests), activity of influenza is highest and remains slightly above expected levels for this time of year.

- At the national level, influenza A activity is showing signs of decrease (9,365 detections; 21.5%).
 - Influenza A accounts for nearly all influenza detections in Canada.
- Activity of respiratory syncytial virus (RSV) has stabilized (2,683 detections; 7.3% positive). Compared to pre-pandemic seasons, RSV activity is within expected levels typical of this time of year.
- Activity of most other non-SARS-CoV-2 respiratory viruses is near expected levels typical of this time of year.
- 34/35 sentinel laboratories reported surveillance data.
