Nanopowders of Metal Oxides and Fluorides Sergey Sokovnin, Vladislav Ilves, 2022-12-27 One of the directions of nanotechnology is the production of nanopowders NPs Nanopowders according to the currently widely used classification of nanomaterials belong to zero dimensional systems in which the limitation of wave functions occurs in all three directions Biological methods are considered the most environmentally friendly way to synthesize NPs but the possibility of biological contamination with mutated microorganisms cannot be ruled out This book presents a new method for producing simple and complex metal oxide and fluoride NPs based on the evaporation condensation process using pulsed electron beam evaporation It presents the results of more than 10 years of study of the characteristics of NPs produced using the aforementioned method This eco friendly method ensures the production of clean NPs which are mesoporous and suitable for use in various applications such as medicine spintronics optoelectronics dosimeters photocatalysis semiconductors and ultraviolet and blue lasers Importantly these NPs have the potential to be used as a drug delivery system and in the creation of new nanostructures that do not contain noble metals The book will be useful for the researchers in macromolecular science nanotechnology chemistry biology and medicine especially those with an interest in drug delivery or cancer therapy

A vner Friedman Willard Miller Jr v PREFACE This volume is an attempt to explore the interface between two diverse areas of applied mathematics that are both customers of the maximum likelihood methodology emission tomography on the one hand and hid den Markov models as

an approach to speech understanding on the other hand There are other areas where maximum likelihood is used some of which are represented in this volume parsing of text Jelinek microstructure of materials Ji and DNA sequencing Nelson Most of the participants were in the main areas of speech or emission density reconstruction Of course there are many other areas where maximum likelihood is used that are not represented here

Instrumentation Between Science, State and Industry B. Joerges, T. Shinn, 2012-12-06 these In this book we appropriate their conception of research technology and extend it to many other phenomena which are less stable and less localized in time and space than the Zeeman Cotton situation In the following pages we use the concept for instances where research activities are orientated primarily toward technologies which facilitate both the production of scientific knowledge and the production of other goods In particular we use the term for instances where instruments and methods traverse numerous geographic and institutional boundaries that is fields distinctly different and distant from the instruments and methods initial focus We suggest that instruments such as the ultracentrifuge and the trajectories of the men who devise such artefacts diverge in an interesting way from other forms of artefacts and careers in science metrology and engineering with which students of science and technology are more familiar The instrument systems developed by research technologists strike us as especially general open ended and flexible When tailored effectively research technology instruments potentially fit into many niches and serve a host of unrelated applications Their multi functional character distinguishes them from many other devices which are designed to address specific narrowly defined problems in a circumscribed arena in and outside of science Research technology activities link universities industry public and private research or metrology establishments instrument making firms consulting companies the military and metrological agencies Research technology practitioners do not follow the career path of the traditional academic or engineering professional

**The Solar Constant and the Solar Spectrum Measured from a Research Aircraft** Matthew Pothén Thekaekara, 1970 The solar constant and solar spectrum were measured from a research aircraft flying at 38 000 feet above the highly variable and absorbing constituents of the atmosphere A wide range of solar zenith angles was covered during six flights for over 14 hours Eleven instruments five for total irradiance and six for spectral irradiance were employed The instruments complemented each other in the measuring techniques employed and wavelength range covered and were calibrated and operated by different experimenters The combined results of these experiments are presented and also a proposed standard for the solar constant and zero air mass solar spectral irradiance The solar constant is found to equal 135.3 mW cm<sup>-2</sup> or 1.90 cal min<sup>-1</sup> cm<sup>-2</sup>
