Evolutionary Biology and Ecology of Ostracoda David J. Horne, Koen Martens, 2013-11-11 Ostracoda Crustacea are potentially excellent model organisms for evolutionary studies because they combine an extensive fossil record with a wide recent distribution and therefore allow studies on both patterns and processes leading to extant diversity The main scientific domains contributing theories concepts and data to evolutionary biology are morphology including ontogeny palaeontology genetics and ecology and to all of these aspects ostracods can contribute This is clearly illustrated by the fifteen papers presented under Theme 3 of the 13th International Symposium on Ostracoda Chatham UK in 1997 which are grouped in the present proceedings one of three volumes resulting from this meeting The contributions deal with the evolution of both extant and fossil forms including most of the Phanerozoic ecology of both marine and freshwater

taxa and developmental morphology of both soft parts and valves Although the canvas is wide each paper clearly shows how studies on Ostracoda can be relevant to general theory on evolutionary biology and ecology
