Focal Controlled Drug Delivery Abraham J. Domb, Wahid Khan, 2014-02-17 The concept of focal controlled drug delivery has been applied for treating illnesses that are localized to a certain tissue or organ These delivery systems are applied directly to the diseased site and deliver a desired dose for an extended time period while minimizing systemic distribution of toxic drug Controlled drug delivery systems have been focused on oral extended release formulations and on systemic delivery of small drugs and peptides Despite the upsurge of interest in focal targeted drug delivery there is currently no single reference text

on the subject By comparison there are numerous authored and edited books on oral systemic and transdermal drug delivery or books on biodegradable polymers as drug carriers Thus the aim of Focal Drug Delivery is to bring together leading experts and researchers in the field to provide an authoritative account of the essential pharmaceutical technological physiological and biological sciences underpinning the topic In addition the book will review advances in treatment options for diseases localized at a certain tissue or organ **Law Enforcement Records Management Guide** ,2000 **PDR Generics** ,1996
