Understanding Article Summaries

An article summary is a short, focused paper about one scholarly article. This paper is informed by critical reading of an article. For argumentative articles, the summary identifies, explains, and analyses the thesis and supporting arguments; for empirical articles, the summary identifies, explains, and analyses the research questions, methods, and findings.

Although article summaries are often short and rarely account for a large portion of your grade, they are a strong indicator of your reading and writing skills. Professors ask you to write article summaries to help you to develop essential skills in critical reading, summarizing, and clear, organized writing. Furthermore, an article summary requires you to read a scholarly article quite closely, which provides a useful introduction to the conventions of writing in your discipline (e.g. Political Studies, Biology, or Anthropology).

Common Problems in Article Summaries

The most common problem that students have when writing an article summary is that they misunderstand the goal of the assignment. In an article summary, your job is to write *about the article*, not about the actual topic of the article. For example, if you are summarizing Smith's article about the causes of the Bubonic plague in Europe, your summary should be about Smith's article: What does she want to find out about the plague? What evidence does she use? What is her argument? You are *not* writing a paper about the actual causes of Bubonic plague in Europe.
