

Is Animal Testing Really Necessary

8 pages | 1767 words

Animal testing is a phrase that most people have heard but are perhaps still unsure of exactly what is involved. Whether it is referred to as animal testing, animal experimentation or animal research, it means the experimentation carried out on animals. Experimental animal testing has been one of the highest debated issues for many years. Animal testing is used for numerous products and applications. Everything from toiletries to medications has likely been tested on animals at some point prior to their distribution (Murnaghan).

Animal testing can be conducted anywhere from a university to a military defense establishment, wherever there is a need for testing a product. Products to be tested will range from cosmetics to pesticides and anything in-between. Animal testing has been around for over 500 years, since the early 17th century, though testing for cosmetic purposes did not start until the 1930s. Animal testing has been highly debated for many years for whether it is moral, ethical, humane, right, wrong, just, fair, etcetera. Find out more by following link [argumentative essays](#).

Many people stand against animal testing because they feel that it is unfair treatment to animals since animals do not have a say in the matter. On the other side of the argument, people fight for animal testing because it allows for prescription drugs and medicines to be tested. Both sides have their valid points, animal testing can be seen as cruel, especially when there are alternatives that can be used, but also, even with alternatives, testing on animals is still sometimes necessary in order to get the needed results.

In a debate between Laurie Pycroft, one of the founders of Pro-Test, and Helen Marston, head of Humane Research Australia, the two go back and forth about animal testing and its potential alternatives. Pycroft starts out the debate by explaining the complexity of the human body and how no investigative tool can "fully replicate the intricacy of a living organism" (Pycroft). Marston returns fire by talking about why animals are not good models for human medicine. She makes the point that animals are "anatomically, genetically, and metabolically" different from humans (Pycroft).

Pycroft continues to bring up different examples of how using animals for research has helped make medical advances for humans, while Marston seems to continue to revolve around the same idea of there being alternatives, but she does not really expand on any one topic, just that there are alternatives. Thomas Hartung talks about the alternatives to animal testing. One of the things Hartung mentions is an experiment done in 2006, "when the TeGenero anti-CD28 antibody, after testing safe at 500-times higher concentrations in monkeys, [it still] led to multiple organ failure within hours in six human volunteers" (Hartung).

Thus, providing an argument against animal testing because sometimes, even when animal testing provides positive results, it does not mean that the same result will be present when human trials are done. Many people believe that animal testing is only about testing cosmetics or new drug therapies, however, there are many different uses for...

Largely inspired by Peter Singer and his 1975 book *Animal Liberation*, a new wave of animal activism emerged in Australia and across the world. In an effort to draw public and media attention to the plight of animals such as the rearing of pigs and poultry in factory farms and the export of live animals to the Middle East and South East Asia, Australian activists were often innovative and provocative in how they made their claims. Through lobbying, disruptive methods and vegan activism, the animal movement consistently contested the politics and culture of how animals were used and exploited. Australians not only observed and learnt from people and events overseas but also played significant international roles. This book examines the complex and conflicting consequences of the animal movement for Australian politics as well as its influence on broader social change **Animal Research Facility Protection** United States.
