

Serious Power For All Types Of Engines

NGK Spark Plugs are available in many heat ranges for each application. Each rating has a wide range of operating temperatures. Selection in the proper heat rating is determined by the condition of the engine and the way it is driven. Wide heat range is crucial for optimum engine performance. The plug must operate at a temperature hot enough to burn off deposits which cause fouling and misfiring, yet be cool enough to prevent pre-ignition. NGK's heat range is much wider than ordinary plugs. In fact, a single NGK Spark plug type often covers the range of two or three conventional plugs. At low speeds or in stop-and-go driving, NGK's will resist build-up and avoid fouling. The same NGK plugs will also react pre-ignitive problems when severe heat is generated by high speed or heavy load conditions. One secret to NGK's wide heat range rating is advanced design, materials, and construction. With the introduction of the copper core in 1988, NGK dramatically changed spark plug technology. Copper's heat conductivity and electrical properties are superior to conventional plugs. Heat is quickly dissipated from the center electrode and insulator to avoid plug-damaging hot spots and to prolong plug life. NGK also engineered a longer insulator nose to minimize carbon build-up and reduce cold operation misfiring. Superior construction, longer life, optimum performance. All are standard with NGK, the brand specified as the source for serious power on most new automobiles, motorcycles, snowmobiles, marine and small engines, then any other spark plug in the world.
