Prior Knowledge Question (Do this BEFORE using the Gizmo.)

Plants use sunlight to produce sugar. Flowering plants make some of this sugar available to animals in the form of **nectar** (a sweet liquid found in flowers) and **fruit**.

1. Why do plants provide bees, butterflies, hummingbirds, and other animals with nectar?

They don't produce it to benefit them. They just produce the nectar and these animals found it to be beneficial to them so they started using it for their own.

2. Why do plants provide animals with fruits such as strawberries, apples, and mangoes?

So that plants can have their seeds travel to populate through these animals taking them.

Gizmo Warm-up

Plants don't produce nectar and delicious fruit just to be nice. As you will learn, bees and other pollinators play a critical role in helping plants to reproduce. Fruits play a role in allowing plants to spread to new locations.

The *Pollination: Flower to Fruit* Gizmo will take you through the reproductive cycle of flowering plants. To familiarize yourself with some of the parts of a flower, begin on the IDENTIFICATION tab.

1. Look at the list of **Flower Parts** on the left. Which of these you heard of before?

parts have

Pollen, Petal, Stigma, and Ovary.

2. On the **Closed view**, drag the **Petal**, **Pedicel**, and **Sepal** terms into the correct spaces. (Use trial and error.) Turn on **Show information about selected parts of the flower**.

A. Which structure protects a maturing bud?

Sepal

B. Which structure is a stalk that supports a single flower?

Pedicel
