Popper And After Four Modern Irrationalists D C Stove:

Popper and After D. C. Stove, 2014-05-20 *Popper and After Four Modern Irrationalists* focuses on a tendency in the philosophy of science of which the leading representatives are Professor Sir Karl Popper the late Professor Imre Lakatos and Professors T S Kuhn and P K Feyerabend Their philosophy of science is in substance irrationalist They doubt or deny outright that there can be any reason to believe any scientific theory and a fortiori they doubt or deny for example that there has been any accumulation of knowledge in recent centuries The book is composed of two parts and Part One explains how these writers succeeded in making irrationalism about science acceptable to readers Part Two explores the intellectual influence that led these writers to embrace irrationalism about science *What Science Knows* James Franklin, 2009-11-01 To

scientists the tsunami of relativism scepticism and postmodernism that washed through the humanities in the twentieth century was all water off a duck's back Science remained committed to objectivity and continued to deliver remarkable discoveries and improvements in technology In *What Science Knows* the Australian philosopher and mathematician James Franklin explains in captivating and straightforward prose how science works its magic He begins with an account of the nature of evidence where science imitates but extends commonsense and legal reasoning in basing conclusions solidly on inductive reasoning from facts After a brief survey of the furniture of the world as science sees it including causes laws dispositions and force fields as well as material things Franklin describes colorful examples of discoveries in the natural mathematical and social sciences and the reasons for believing them He examines the limits of science giving special attention both to mysteries that may be solved by science such as the origin of life and those that may in principle be beyond the reach of science such as the meaning of ethics *What Science Knows* will appeal to anyone who wants a sound readable and well paced introduction to the intellectual edifice that is science On the other hand it will not please the enemies of science whose willful misunderstandings of scientific method and the relation of evidence to conclusions Franklin mercilessly exposes

God Is Not a Story Francesca Aran Murphy, 2007-07-19 This is a challenging critique of narrative theologies Murphy argues that the widespread notion that the role of the theologian is to tell God's story has not helped theology to advance the reality of its doctrines She offers her own alternative approach making use of cinema and film theory

Foundations of Mathematical System Dynamics George J. Klir, 2017-05-25 This book is a foundational study of causality as conceived in the mathematical sciences It is shown that modern mathematical dynamics involves a formulation of the fundamental concept of causality and an exhaustive classification of causal systems Among them are the self steering and self regulating systems which together form the class of purposive systems on whose specific properties the book then focuses These properties are the mathematical dynamical foundations of the behavioural and social sciences This is the definitive book on causality and purposive processes by the originator of the mathematical concept of self steering *Working with Dangerous People* Jones David, 2018-08-09 This book written by people with an intimate knowledge of prisons and dangerous

prisoners and their mental health and welfare offers something of an antidote to the simply coercive and repressive In the words of the editor it offers a humane approach to working with dangerous people It should be a basic tenet of psychological work with clients that we are prepared and able to be in sympathy with them to have some understanding of their despair This volume offers a contribution to ways of thinking about dangerous people and their behavior and working with them constructively respectfully and possibly redemptive I sincerely hope that this book will be read by all those concerned with offenders in whatever capacity from clinicians to politicians from policy makers to managers It will well reward their interest and attention Christopher Cordess Psychoanalyst and Emeritus Professor of Forensic Psychiatry University of Sheffield
