2.1 Read the passage below and answer the questions that follow.

Peat lands are special wetlands that play a very important role in ecology. A peat land, of approximately 5 000 years old, near Mufang is almost destroyed because of excessive extraction of water from the nearby Mokepo river. The water is extracted for human consumption.

Peat lands like the one near Malling is exceptional and play an important role in storing water as well as preventing climate changes.

Dr. Paul-Louis Dranding said that carbon that is "held" or "stored" by peat lands combats climate change because it decreases the amount of carbon in the atmosphere.

Peat lands trap about one third of the world's carbon. Approximately 50% of wetlands worldwide are peat lands. However in South Africa about 10% of the wetlands are peat lands.

Grundling explained that peat lands can hold about 1 000 times its own mass in water. This replenishes the water table and is the source that keeps streams flowing. The "sponge effect" of the peat also makes it possible to store water that is then released during the seasons.

Dr. Grunwald said that it might be too late to restore the peat land near Malling but it might be possible to restore some parts of it if more water is supplied to this peat land.

The result of this destruction is depletion of the water table. The habitat of numerous fish and bird species that lived in the canal bed was also destroyed.

Gravity's Century Ron Cowen, 2019-05-06 This gracefully written history of twentieth century gravity research brings to life the discoveries and developments that confirmed the theory of relativity Publishers Weekly starred review Albert Einstein did nothing of note on May 29 1919 yet that is when he became immortal On that day astronomer Arthur Eddington and his team observed a solar eclipse and found something extraordinary gravity bends light just as Einstein predicted The finding confirmed the theory of general relativity fundamentally changing our understanding of space and time A century later the Event Horizon Telescope

examined the space surrounding Sagittarius A the supermassive black hole at the center of the Milky Way to determine whether Einstein was right on the details In Gravity's Century award winning science writer Ron Cowen brings to life the incredible scientific journey between these two events and sheds light on their groundbreaking implications From the development of radio telescopes to the discovery of black holes and quasars and the still unresolved place of gravity in quantum theory Cowen breaks down the physics in clear and approachable language Gravity's Century vividly demonstrates how the quest to understand gravity is really the quest to comprehend the universe
