

"Motion in a Straight Line: Crash Course Physics #1":

1. The Police use physics to figure out how fast you're moving through the world.
2. Time, position, velocity, and acceleration are all linked together via the kinematic equations.
3. Driving on a straight highway is an example of 1 dimensional motion.
4. time tells you how long you were driving for. Position lets you know where you are or where you were. It can be negative.
5. velocity is the way your position changes over time. It's like speed, but it tells you which direction you're moving in.

6. Draw and label the graph of the three different scenarios given:

A) You sat for 3 seconds, 4 meters away from the light.

B) You coasted at 1 m/s for 3 s.

C) You are standing still, 4 m away from the light, you hit the gas so that after 1 s you had gone 1 m, 4 m after 2 s, and 9 m after 3 s.

7. Velocity is the change in position over time and acceleration is the change in velocity over time.

8. The equation known as the "definition of acceleration" is $v = v_0 + at$

where v_0 is the initial velocity, and v is the instantaneous velocity.

$v = v_0 + at$

9. When something is falling, the force of gravity is making the object accelerate at 9.8 m/s^2 .

10. The second kinematic equation, the displacement curve equation is $x = x_0 + v_0t + \frac{1}{2}at^2$

$$x = x_0 + v_0t + \frac{1}{2}at^2$$

11. Determine whether or not you were speeding when the cops pulled you over. Show your work.
12. Did you deserve that ticket? **YES**
