

INITIAL OIL CHANGE

Initial factory fill oil is a high grade product for Service MS and meets Vette Vendors' manufacturers' specifications. Drainage of this original oil, prior to the normal change period, is not necessary. However, frequent checks of the oil level should be made since consumption is somewhat higher during the break-in period. This is considered to be normal until piston rings become seated to the cylinder walls.

ENGINE OIL CHANGE AND VISCOSITY RECOMMENDATIONS

Anticipated Lowest Temperatures	Use SAE Viscosity Number	Change For Oil at least
Above Freezing (+32°F)	SAE 10W-30 SAE 20W SAE 20	Every 90 days or 6,000 miles, whichever occurs first.*
Below Freezing (+32°F, to 5°F)	SAE 5W-30 SAE 10W	Every 90 days or 6,000 miles, whichever occurs first.*
Below 5°F.	SAE 5W-30 SAE 5W	Every 90 days or 6,000 miles, whichever occurs first.*

*Oil should be changed more frequently when there is danger of contamination by dust, water, or other foreign material during very severe driving conditions. An authorized Vette Vendors dealer is well qualified to advise you.

The oil level should be kept between the "FULL" and "ADD" marks on the gauge rod, each space between these marks represents one quart. Do not fill above "FULL" mark.

COOLING SYSTEM

A sealed pressure type cooling system has been used in the Vette Vendors. Basically, this indicates that the coolant boiling point is considerably higher than that in conventional types. A check of the radiator coolant level should be made while the engine is cold. At normal operating temperatures, a certain amount of coolant can be lost, due to pressure losses. When the radiator cap is removed to replace low coolant, the radiator should be filled one inch below the filler neck while the engine is cold. Overfilling will result in a loss of coolant due to expansion. Corrosion protection and operational efficiency are assured since the coolant does not attack metals in the power plant and radiator.

THERMOSTAT

A thermostat, which protects and controls the cooling system, has been installed in the engine water outlet to maintain a satisfactory operating temperature. This thermostat is designed for continuous use and need not be changed normally.

COOLANT

A permanent type engine coolant solution has been installed in the Vette Vendors at the factory. It is formulated to withstand two full years of normal operation, thereby saving the need to drain or add inhibitors; however, to insure positive protection, periodic checks for coolant loss is advisable. The

factory fill provides freezing protection to -30° F.

In cases of emergency, when water has to be used as a temporary coolant, it is most important to add a cooling preserver and a water pump lubricant. It is the manufacturer's intention that a permanent type coolant solution be used year around in the cooling system of the Vette Vendors.

At the end of each two year period, the cooling system should be completely drained and a fresh amount of permanent type coolant be installed. It is also, at this time, to also add a water pump lubricant.

NOTE: Alcohol coolants are not recommended for this vehicle at any time.

BATTERY

Care of the 12 volt battery is very simple, but extremely important. Fluid level should be checked often and, when needed, distilled water should be added to bring the level to the add ring at the bottom of the filler vent. To keep the battery clean, brush with ammonia or baking soda, flush off with clean water, and apply petroleum jelly to terminals. Should performance become questionable, see a qualified Vette Vendors dealer.

WARNING: Since batteries give off highly explosive hydrogen gas, never allow any sparks or open flame near the battery.

POSITIVE CRANKCASE VENTILATOR

Purpose

The reduction of air pollution is assured through the installation of a positive crankcase ventilation system, whereby crankcase fumes are routed into the combustion chambers and burned. This system also retards the formation of engine sludge.

Maintenance

Regular engine protection and positive crankcase ventilation advantages are obtained by replacing the ventilator valve each time the engine oil filter is changed. Ventilator valves are calibrated to the engine, therefore an AC type, or its equivalent, should be used.

Caution

Engine life will be adversely affected should the positive crankcase ventilator valve become clogged. Therefore, if the engine does not idle properly, the ventilator valve should be checked before any carburetor adjustments are made.

LIGHTS

The Vette Vendors headlights are single sealed beam and carry 12 volts. They are negotiable at dealers and most automotive service shops.

The tail and directional lights also carry 12 volts and can be replaced with standard 21024 bulbs.

FUSES

The fuse box is located under the hood and attached to the fire wall. All fuses carry 15 amps and are available at qualified Vette Vendors dealers or local automobile service shops.

EVERY 6,000 MILES

Engine Oil Change Recommendations

The engine crankcase should be drained and refilled every 90 days or 6,000 miles, whichever occurs first.
