1. The project is called "Exploring Ecosystems". The aim of this is to educate you about the structure and function of ecosystems and the various components that make them up, and to provide you with a deeper understanding of how living and non-living elements interact in an ecosystem, and the importance of biodiversity.

- Research the properties of ecosystems, including the different types of ecosystems, the flow of energy, and the interactions between living and non-living components. You should focus on the following topics:
 - The different types of plants and animals that live in the ecosystem
 - The role of decomposers, such as bacteria and fungi, in breaking down organic matter
 - The role of the sun, water, and soil in supporting life in the ecosystem
 - The interdependence of organisms within the ecosystem and the food web
 - The impact of human activity on the ecosystem, such as pollution or habitat destruction
- Conduct a field study of a local ecosystem, such as a park or nature reserve. Observe the different living and non-living components of the ecosystem and record their observations in a book. You should also take photographs and collect samples of plants and animals.

1. The project is called "Investigating Acids and Bases". This will educate you about the properties of acids and bases, the pH scale, and to provide you with a deeper understanding of the chemical reactions that occur between acids and bases and their practical applications in everyday life.

- Research the properties of acids and bases and the pH scale. You should focus on the following topics:
 - The definition and properties of acids and bases
 - The pH scale and how it measures the acidity or alkalinity of a substance
 - The chemical reactions that occur between acids and bases, including neutralization reactions
 - The practical applications of acids and bases in everyday life, such as in food and drink, cleaning products, and industry
- Conduct simple experiments to measure the pH of different substances. Use pH test strips or a pH meter to measure the acidity or alkalinity of various household items such as lemon juice, baking soda, vinegar, and soap. Record your observations and measurements and discuss your results.
- Observe the chemical reactions that occur between acids and bases. You can do this by mixing common acids and bases in small quantities, such as vinegar and baking soda, and observe the changes in the substances and the reactions that occur.
- Create a presentation to share what you have learned with your classmates. This can be in the form of a poster, a PowerPoint, a video or a leaflet. You should include your research findings, experiment results, and observations in the presentation.
- Conduct an experiment to design and make your own pH indicator from natural materials such as red cabbage or beet juice, and use it to test the pH of different substances. You can also make a pH scale chart to demonstrate your understanding of the pH scale and how it measures the acidity or alkalinity of a substance.
