

NOKIA NOTIFICATIONS (II)

- The process of receiving notifications is straightforward. The application, implementing Client API, registers itself for receiving notifications by sending service specific *sender identification* (sender ID) to Nokia Notifications server.
- Nokia Notifications server responds by sending a device specific *registration identification* (registration ID, RID) to the client device.
- The client application then provides the RID for the 3rd party server, which implements Service API.
- Finally, the 3rd party server can send notifications, via Nokia Notifications server, for the devices whose registration ID it knows. It is the responsibility of the developer to implement a) client application with Client API and b) server with Service API.

Trawling for Minnows Damien J. Neven, Pénélope Papandropoulos, Paul Seabright, 1998 This report examines the policy of the European Union towards agreements between firms from three perspectives First it considers what the literature in industrial economics has to say about the effects of such agreements on competition and about the consequent rationale for public intervention Second it examines the decisions of the European Commission and the European Court asking to what extent these are consistent with the recommendations that emerge from the scientific literature Third it looks at the procedures of the Commission and the way it undertakes investigations and reaches decisions in order to see to what extent these procedures represent an appropriate means of implementing a defensible policy
