## Student Exploration: Populations and Samples

**Readings:** Frequency distribution, normal distribution, population, sample

**Prior Knowledge Questions** (What do you already know about this topic?)

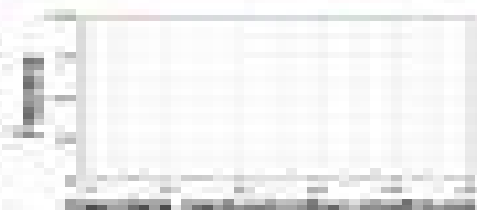

a. **Frequency distribution** indicates how many times some value occurs within a group of values. Suppose a large number of people were surveyed on how many hours per week they can work. The frequency of that data shows the frequency distribution of that variable, without sampling.

b. How would you approximate shape of the distribution?

\_\_\_\_\_

\_\_\_\_\_

c. In the graph given on right, which value gives more the frequency distribution might give that the same people could describe the number hours working the year

**Classroom Setup**

In many cases, a population frequency distribution is not **symmetrical**. However, when frequency is similar **sample** or values of the population, then the sample will approach a normal distribution. This can be seen with sampling of samples using the Population and Samples Game™.

a. The random seed represents the distribution approximates with frequency distribution described above. With what sample would you be studying frequency distribution? There is theoretical seed distribution. First mean \_\_\_\_\_, then mean \_\_\_\_\_.

b. About the simulation speed of the data in the left side (Page 10) to start taking sample from population. Use Power 10 when the speed is at about 10.

i. What is the mean of each sample? (Mean) \_\_\_\_\_, then mean \_\_\_\_\_.

ii. How many of the sample means is the population mean? \_\_\_\_\_
