(Boom!) All About Volcanoes

Volcanoes are mountains – except for one significant difference. Below the surface lies molten rock. When volcanoes erupt, rock fragments and gas flow up through the top and cause trigger avalanches, earthquakes, tsunamis, mudslides, flooding, and release ash and rockfalls.

Beneath the earth's outer crust lies the mantle. The mantle stretches 1,800 miles deep and is composed to silicate rocks, high in iron and magnesium. Heat from the earth's core makes the rocks rise, then cool, then move again towards the core. When magma from the mantle moves toward the earth's surface, it may erupt and form ash deposits or lava flows. The magma moves towards the surface because the solid rock is more dense than the magma. Volcanoes actually increase in size with repeated eruptions.

Volcanoes are classified as either dormant, extinct, or active. Dormant volcanoes have not erupted in many years, but could possibly erupt, whereas with an extinct volcano, it has already erupted and there is no chance it will erupt again. Active volcanoes have erupted recently and might erupt again. The earth's crust is fragmented into tectonic plates. These plates fit together across the earth, and the plates moved in different ways. Some of these tectonic movements cause volcanoes to erupt near the plates' edges.

Volcanoes may be one of several shapes: cinder cone, shield, or stratovolcanoes. Cinder cone volcanoes

Olds, 2014-02-10 The Cambridge Handbook of Engineering Education Research is the critical reference source for the growing field of engineering education research featuring the work of world luminaries writing to define and inform this emerging field The Handbook draws extensively on contemporary research in the learning sciences examining how technology affects learners and learning environments and the role of social context in learning Since a landmark issue of the Journal of Engineering Education 2005 in which senior scholars argued for a stronger theoretical and empirically driven agenda engineering education has quickly emerged as a research driven field increasing in both theoretical and empirical work drawing on many social science disciplines disciplinary engineering knowledge and computing The Handbook is based on the research agenda from a series of interdisciplinary colloquia funded by the US National Science Foundation and published in the Journal of Engineering Education in October 2006

Science Framework for the 1996 and 2000 National Assessment of Educational Progress, 1999

Student Assessment Dylan Wiliam, Douglas Fisher, Nancy Frey, 2024-05-17 Fuel student driven success and enhance learning with better assessment What if there was a better way to collect and interpret assessment data that could strengthen the link between teaching and learning Student Assessment

Better Evidence Better Decisions Better Learning is the innovative guide to show you how it's done and done right. This unique book offers a new assessment model focused on decision-driven data collection and provides an arsenal of tools for collecting better evidence to increase student learning. You will learn the importance of assessment in the teaching and learning process, what a decision-driven data collection assessment model looks like and how it differs from a more traditional data-driven decision-making model, how to effectively establish learning intentions and success criteria within assessments to actively engage students in their own learning, how to implement an array of assessment tools that yield better evidence and improve decision-making, how to address the challenge of ensuring authenticity in students' responses when AI-generated content is becoming more common. With this guide in hand, you'll be ready for a better approach to assessment armed with practical tools and strategies to ensure students can analyze, synthesize, adapt, critique, and most importantly, take charge of their own learning.

Resources in Education, 2001 Repositioning Pedagogical Content Knowledge in Teachers' Knowledge for Teaching Science Anne Hume, Rebecca Cooper, Andreas Borowski, 2019-01-28

This book enhances readers' understanding of science teachers' professional knowledge and illustrates how the Pedagogical Content Knowledge research agenda can make a difference in teachers' practices and how students learn science. Importantly, it offers an updated international perspective on the evolving nature of Pedagogical Content Knowledge and how it is shaping research and teacher education agendas for science teaching. The first few chapters background and introduce a new model known as the Refined Consensus Model (RCM) of Pedagogical Content Knowledge (PCK) in science education and clarify and demonstrate its use in research and teacher education and practice. Subsequent chapters show how this new consensus model of PCK in science education is strongly connected with empirical data of varying nature, contains a tailored language to describe the nature of PCK in science education, and can be used as a framework for illuminating past studies and informing the design of future PCK studies in science education. By presenting and discussing the RCM of PCK within a variety of science education contexts, the book makes the model significantly more applicable to teachers' work.
