

Effects of hydrofluoric acid

Hydrofluoric acid (HF) can burn through glass or concrete. Fluoride ions are absorbed through the skin, destroying tissue until they are sequestered in the bones. HF damage causes severe, long-term pain and slow-healing burns and can be deadly. Significant delays between exposure and symptom onset may occur.

Some possible complications of exposure

Airway compromise and swelling in the respiratory tract

Pulmonary edema (fluid in the lungs)

Burns may involve underlying bone

Corneal perforation and blindness

Arrhythmia (irregular heartbeat)

Tissue destruction

Also:

- Electrolyte abnormalities
- Scarring
- Loss of digits

■ Penetrates fingernails and burns the pulp beneath without destroying the nails. Treatment can require the removal of the nails.
