Atlas of Lymphoscintigraphy and Sentinel Node Mapping Giuliano Mariani, Gianpiero Manca, Federica Orsini, Sergi Vidal-Sicart, Renato A. Valdés Olmos, 2012-12-23 Although lymphoscintigraphy was originally introduced into clinical routine for identification of the cause of peripheral edema more recently it has been widely applied for radioguided biopsy of the sentinel lymph node in patients with solid cancers The procedure is now considered crucial for adequate planning of oncologic surgery in a growing number of cancers This atlas presents a collection of richly illustrated teaching cases that demonstrate the clinical relevance and impact of lymphoscintigraphy in different pathologic conditions After introductory chapters on the anatomy physiology and pathophysiology of lymphatic circulation the role of lymphoscintigraphy in differential diagnosis of peripheral edema and characterization of intracavitary lymph effusions is addressed The principal focus of the book however is on the use of lymphoscintigraphic mapping for radioguided sentinel node biopsy in cutaneous melanoma and cancers at a range of anatomic sites The most commonly observed lymphoscintigraphic patterns are depicted and anatomic variants and technical pitfalls of the procedure receive careful attention The role of tomographic multimodality imaging is also considered The atlas will be an excellent learning tool for residents in nuclear medicine and other specialists with an interest in the field

Computational Architectures Integrating Neural and Symbolic Processes Ron Sun, Lawrence A. Bookman, 2007-08-19 Computational Architectures Integrating Neural and Symbolic Processes A

Perspective on the State of the Art focuses on a currently emerging body of research. With the reemergence of neural networks in the 1980s with their emphasis on overcoming some of the limitations of symbolic AI, there is clearly a need to support some form of high level symbolic processing in connectionist networks. As argued by many researchers on both the symbolic AI and connectionist sides, many cognitive tasks e.g. language understanding and common sense reasoning seem to require high level symbolic capabilities. How these capabilities are realized in connectionist networks is a difficult question and it constitutes the focus of this book. Computational Architectures Integrating Neural and Symbolic Processes addresses the underlying architectural aspects of the integration of neural and symbolic processes. In order to provide a basis for a deeper understanding of existing divergent approaches and provide insight for further developments in this field, this book presents 1) an examination of specific architectures grouped together according to their approaches, their strengths and weaknesses, why they work and what they predict, and 2) a critique/comparison of these approaches. Computational Architectures Integrating Neural and Symbolic Processes is of interest to researchers, graduate students and interested laymen in areas such as cognitive science, artificial intelligence, computer science, cognitive psychology and neurocomputing. It is keeping up to date with the newest research trends. It is a comprehensive in depth introduction to this new emerging field.
