

Tips for Writing an Effective Patient Narrative

Narrative writing or writing patient safety narratives is an integral part of any clinical study report writing. Before dwelling into its guidelines, let us first understand what it is and what importance it carries in clinical research.

1) Always use hard space and hard hyphens for days, dates, and laboratory values to avoid splitting on the next page or next line except at the beginning of a sentence (hard hyphen: ctrl + shift + hyphen; hard space: ctrl + shift + space)

2) Be consistent while using the patient throughout the narrative.

3) Tag the narrative template against the information available in data sources to help the reviewer track the information easily.

4) Always use generic names for the patient's concomitant medications or treatment medications for adverse events. However, for combination drugs, generic drug name should be provided along with the trade name in brackets; for example, lisinopril-hydrochlorothiazide (Zestoretic)

5) For describing the adverse event and medical history or ongoing condition of the patient, always use the preferred terms like pain in extremity should be reported as pain in hands or pain in legs.

6) Quick check your narrative before submitting it to the scientific reviewer.

In simple terms, a narrative is a brief summary of the adverse events experienced by the patients during a clinical trial of a drug.
