

The Challenges of Writing Patient Safety Narratives for Clinical Study Reports

-Thalla Sanjeeva

Introduction

There are many different challenges that a Medical writer may encounter while writing/ managing safety narratives for Clinical Study Reports. This paper describes the importance of safety narratives and emphasizes the related challenges and gives some ideas to help you in writing/ managing patient safety narratives. The Clinical Study Report is an integrated full report of an individual clinical study of any therapeutic, prophylactic or diagnostic agent conducted in human subjects. There should be a brief narrative describing each death, each serious adverse event, and any significant adverse events that are judged to be of special interest because of clinical importance. Patient safety narratives are vital components of Clinical Study Reports (CSRs) and Pharmacovigilance (e.g. Post Marketing safety reports).

What is the Role and Purpose of Patient safety narratives?

The Clinical Study Report is an integrated full report of an individual clinical study of any therapeutic, prophylactic or diagnostic agent conducted in human subjects. There should be a brief narrative describing each death, each serious adverse event, and any significant adverse events that are judged to be of special interest because of clinical importance. Patient safety narratives are vital components of Clinical Study Reports (CSRs) and Pharmacovigilance (e.g. Post Marketing safety reports). As per International Conference on Harmonization (ICH) E3 (Section 12.3.2/ 14.3.3) the Narrative should describe the following:

- The nature and intensity of the event
- The clinical course leading up to the event
- Timing relevant to study product administration
- Relevant Laboratory measurements
- Drug administration status
- Postmortem findings
- Investigator's opinion, etc.

In addition, the following information should be included:

- Subject Identifier
- Age and sex of the subject

Translation and Communication Vicent Montalt-Resurrecció, Isabel García-Izquierdo, Ana Muñoz-Miquel, 2024-12-27 In response to the growing importance and spread of patient centred care the need to empower patients and the trend towards democratising specialised knowledge in health care this book puts patients centre stage and provides concepts methods and learning materials to enhance effective communication with patients and relatives in health care settings Opening chapters establish the conceptual and methodological framework needed to understand patient centredness the crucial role of context and culture the range of communicative situations and text genres involved and the diversity of modes formats and media in which patient centred translation and communication take place Subsequent chapters raise awareness of the importance of carefully defining the target audience and producing understandable and empathetic messages and provide analytical tools for making decisions in these three key areas The concluding chapter offers avenues for research in patient centred translation and communication with the hope of bridging the gap between practice and research and advancing this growing field of inquiry Including activities resources summaries further reading and pointers to further research in each chapter this is the essential guide for all translators and interpreters students and professionals working in this area of translation studies health care and communication studies **FDA's Drug Review Process and the Package Label** Tom Brody, 2017-12-01

FDA's Drug Review Process and the Package Label provides guidance to pharmaceutical companies for writing FDA submissions such as the NDA BLA Clinical Study Reports and Investigator's Brochures The book provides guidance to medical writers for drafting FDA submissions in a way more likely to persuade FDA reviewers to grant approval of the drug In detail the book reproduces data on efficacy and safety from one hundred different FDA submissions NDAs BLAs The book reproduces comments and complaints from FDA reviewers regarding data that are fragmentary ambiguous or that detract from the drug's approvability and the book reveals how sponsors overcame FDA's concerns and how sponsors succeeded in persuading FDA to grant approval of the drug The book uses the most reliable and comprehensive source of information available for writing FDA submissions namely text and data from NDAs and BLAs as published on FDA's website The source material for writing this book included about 80 000 pages from FDA's Medical Reviews FDA's Clinical Pharmacology Reviews and FDA's Pharmacology Reviews from one hundred different NDAs or BLAs for one hundred different drugs Each chapter focuses on a different section of the package label e.g. the Dosage and Administration section or the Drug Interactions section and demonstrates how the sponsor's data supported that section of the package label Reveals strategies

for winning FDA approval and for drafting the package label Examples are from one hundred FDA submissions NDAs BLAs for one hundred different drugs e g for oncology metabolic diseases autoimmune diseases and neurological diseases This book uses the most reliable and comprehensive source of information available for writing FDA submissions namely the data from NDAs and BLAs as published on FDA s website at the time FDA grants approval to the drug

Targeted Regulatory Writing Techniques: Clinical Documents for Drugs and Biologics Linda Fossati Wood, MaryAnn Foote, 2009-01-05 This book describes the authors standard or best practices used in writing regulated clinical documents for the drug and biologics industry The fundamental premise of this book is that the end documents submitted to a health authority is dependent on the beginning the planning and strategy that go into organizing written documentation Each regulatory document inherently exists within a constellation of related documents This book attempts to show the relationships between and among these documents and suggests strategies for organizing and writing these documents to maximize efficiency while developing clear and concise text At all times and irrespective of applicable laws and guidelines good communication skills and a sense of balance are essential to adequately accurately and clearly describe a product s characteristics At no time should the reader perceive these suggestions to be the only viable solution to writing regulatory documents nor should the reader expect that these suggestions guarantee product success The audience for this book is the novice medical writer or those who would like to explore or enhance regulatory writing skills We assume the reader will have a basic understanding of written communication but little experience in applying this skill to the task of regulatory writing Extensive knowledge of science clinical medicine mathematics or regulatory affairs law is not required to use the best practices described in this book

Mental Health Survival Kit and Withdrawal from Psychiatric Drugs Peter C. Gøtzsche ,2021-12-06 This book can help people with mental health issues to survive and return to a normal life Citizens believe and the science shows that medications for depression and psychosis and admission to a psychiatric ward are more often harmful than beneficial Yet most patients take psychiatric drugs for years Doctors have made hundreds of millions of patients dependent on psychiatric drugs without knowing how to help them taper off the drugs safely which can be very difficult The book explains in detail how harmful psychiatric drugs are and gives detailed advice about how to come off them You will learn why you should not see a psychiatrist if you have a mental health issue that psychiatric drugs are addictive that the biggest lie in psychiatry is the one about a chemical imbalance being the cause of psychiatric disorders that psychiatric diagnoses are unscientific and that doctors disagree widely when making diagnoses that psychiatric drugs can lead to permanent brain damage that psychiatric drugs should never be stopped abruptly because withdrawal reactions can be dangerous why psychotherapy and other psychosocial interventions should be preferred over drugs why you should generally not believe what doctors tell you about psychiatric disorders and their treatment why volunteers have found the book so important that they have translated it into French Portuguese and Spanish Peter Gøtzsche has written a very personal account of his battle to get the institution of psychiatry to accept that its drugs are not the magic pills they are made out to be Every medical practitioner who prescribes them and every person who takes them should read this book and be warned Niall McLaren author of Anxiety The Inside Story Peter Gøtzsche's new book meets patients need to get tools on how to deal with psychoactive drugs and above all not to start them Gøtzsche is very clear about the role of GPs in medicalizing grief misfortune opposition and bad luck In this he finds the American emeritus professor of psychiatry and chairman of the DSM III committee Allen Frances at his side Both Gøtzsche and Frances have repeatedly stated that psychoactive drugs should not be prescribed by GPs because they lack experience in their use And above all unhappiness grief and bad luck are not signs of brain disorders they belong to daily life Additionally Gøtzsche reveals that most psychoactive drugs do not work they might only achieve statistically significant differences compared to placebo but that's not what patients need Dick Bijl former GP epidemiologist and current president of the International Society of Drug Bulletins Peter C Gøtzsche wrote this book to help people with mental health problems survive and return to a normal life His

book explains in detail how psychiatric drugs are harmful and people are told how they can safely withdraw from them It also advises on how people with mental health problems can avoid making a career as a psychiatric patient and losing 10 or 15 years of their life to psychiatry You will find precious material to help plan and accompany this process of liberation from psychiatry Fernando Freitas PhD Psychologist Full Professor and Researcher at the National School of Public Health ENSP FIOCRUZ Co editor of Mad in Brazil In this work addressed to people affected by the risk of being caught in the system of attention to mental health issues Dr G tzsche succinctly exposes without beating about the bush the damage caused by psychiatric medications demonstrates that their widespread use is not based on evidence which is mainly driven by commercial pressures that have nothing to do with the recovery of patients and present safe ways to dispose of them always gradually and under supervision of trustworthy people to minimize the syndrome of abstinence and successfully overcome all the difficulties that the process involves Enric Garc a Torrents writing for Mad in Spain Learn more at www.scientificfreedom.dk From the Institute for Scientific Freedom
