Remote Sensing Digital Image Analysis John A. Richards, 2022-01-06 Remote Sensing Digital Image Analysis provides a comprehensive treatment of the methods used for the processing and interpretation of remotely sensed image data. Over the past decade there have been continuing and significant developments in the algorithms used for the analysis of remote sensing imagery even though many of the fundamentals have substantially remained the same. As with its predecessors this new edition again presents material that has retained value but also includes newer techniques covered from the perspective of operational remote sensing. The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image analysis in remote sensing. The presentation level is for the mathematical non specialist. Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background. The chapters progress logically through means for the acquisition of remote sensing images, techniques by which they can be corrected and methods for their interpretation. The prime focus is on applications of the methods so that worked examples are included and a set of problems conclude each chapter.

The Algorithm Design Manual Steven S Skiena, 2009-04-05 This newly expanded and updated second edition of the best selling classic continues to take the mystery out of designing algorithms and analyzing their efficacy and efficiency. The second part Resources is intended for browsing and reference and comprises the catalog of algorithmic resources, implementations and an extensive bibliography. NEW to the second edition: Doubles the tutorial material and exercises over the first edition. Provides full online support for lecturers and a completely updated and improved website component with lecture slides, audio and video. Contains a unique catalog identifying the 75 algorithmic problems that arise most often in practice, leading the reader down the right path to solve them. Includes several NEW war stories relating experiences from real world applications. Provides up to date links leading to the very best algorithm implementations available in C, C++ and Java.
