On a previous visit, we were able to see the new library, which is a welcome addition to the school. We went through the library to the study, and sat down there. In the study there was a large map of Africa, which I thought was interesting. The teacher who was with us, told us that the people who constructed the new library had been given a grant from the Ford Foundation. This was a very nice surprise to us.

The many long flights required by the small wings of pterosaurs suggests that they could only move at the wing's edge, perpendicular to the axis of flight. This was the case during the first flights of the pterosaurs and the last flights, and there is nothing in flight mechanics to suggest otherwise.

The other 2 species present at the site were both recorded in small numbers. A single *Leucosticte taeniata* was seen on the 1st day, and a single *Loxia leucoptera* on the 2nd.
