Smith, Karlson Hargroves, Cheryl Desha, 2010 Cents and Sustainability is a clear sighted response to the 1987 call by Dr Gro Brundtland in Our Common Future to achieve a new era of economic growth that is forceful and at the same time socially and environmentally sustainable The Brundtland Report argued that not only was it achievable but that it was an urgent imperative in order to achieve a transition to sustainable development while significantly reducing poverty and driving clean and green investment With some still arguing for significantly slowing economic growth in order to reduce pressures on the environment this new book Cents and Sustainability shows that it is possible to reconcile the need for economic growth and environmental sustainability through a strategy to decouple economic growth from environmental pressures combined with a renewed commitment to achieve significant environmental restoration and poverty reduction Beginning with a brief overview of some of the most pressing environmental challenges of our time the book then explains decoupling theory overviews a number of factors that can

undermine and even block efforts to decouple in both developed and developing countries and then discusses a number of key considerations to assist the development of national decoupling strategies The book then focuses on presenting evidence to support greater action not just on climate change but also on decoupling economic growth from the loss of biodiversity and the deterioration of natural systems freshwater extraction waste production and air pollution In the lead up to the 2012 United Nations Earth Summit and beyond Cents and Sustainability will be a crucial guide to inform and assist nations to develop strategies to significantly reduce environmental pressures strengthen their economy create jobs and reduce poverty I commend the team from The Natural Edge Project and their partners for undertaking to develop a response to Our Common Future to mark its 20th anniversary Dr Gro Brundtland Sequel to The Natural Advantage of Nations Published with The Natural Edge Project *Information Technology Entrepreneurship and Innovation* Zhao, Fang, 2008-05-31 It has become a widely recognized fact that entrepreneurs and information technology have become the backbone of the world economy The increasing penetration of IT in society and in most of industries businesses as well as the joining forces of entrepreneurship and innovation in the economy reinforce the need for a leading and authoritative research handbook to disseminate leading edge findings about entrepreneurship and innovation in the context of IT from an international perspective *Information Technology Entrepreneurship and Innovation* presents current studies on the nature process and practice of entrepreneurship and innovation in the development implementation and application of information technology worldwide as well as providing academics entrepreneurs managers and practitioners with up to date comprehensive and rigorous research based articles on the formation and implementation of effective strategies and business plans
