advertising etc we are witnessing as Horst Bredekamp observes an immense mass of images that fill our time and affect the most diverse areas of our culture The ancient connection between science and art recalled by Goethe emerges with unusual evidence thanks to intersecting patterns and expressive forms that are sometimes shared by different forms of knowledge Creating a glossary and a culture of these intersections is the task of morphology which thus enters into the boundaries between aesthetics art design advertising and sciences from mathematics to computer science to physics and to biology in order to provide the founding elements of a grammar and a syntax of the image The latter in its formal quality both expressive and symbolic is a fundamental element in the unification of the various kinds of knowledge which in turn come to be configured in this regard also as styles of vision The glossary is subdivided into contiguous sections within a complex framework of cross references In addition to the two curators the book features the collaboration of a team of scholars from the individual disciplines appearing in the glossary
