

Java OO Interview Questions and Answers

If you asked me to pick a section that is most popular with the interviewers, this is it. If you don't perform well in Object Oriented (i.e. OO) programming, your success rate in interviews will be very low. Good interviewers will be getting you to analyze or code for a particular scenario. They will be observing your decisions with interfaces and classes, and question your decisions to ascertain your technical skills, analytical skills, and communication skills. You can't memorize your answers. This section requires some level of experience to fully understand.

In this blog, I cover some OO interview questions and answers. If you are interested in more questions and answers, the "**Core Java Career Essentials**" book has a whole chapter dedicated for OO questions and answers with enough examples to get through your OO interview questions with flying colors.

Q. How do you know that your classes are badly designed?

A.

- If your application is fragile – when making a change, unexpected parts of the application can break.
- If your application is rigid – it is hard to change one part of the application without affecting too many other parts.
- If your application is immobile – it is hard to reuse the code in another application because it cannot be separated.

Overly complex design is as bad as no design at all. Get the granularity of your classes and objects right without overly complicating them. Don't apply too many patterns and principles to a simple problem. Apply them only when they are adequate. Don't anticipate changes in requirements ahead of time. Preparing for future changes can easily lead to overly complex designs. Focus on writing code that is not only easy to understand, but also flexible enough so that it is easy to change if the requirements change.

Object Oriented Interview Questions And Answers
