 Particles move _____ and _____ more frequently.
 _____ describes the number of particles of a substance in a given volume. It is often expressed as moles of a substance per litre (_____). Particles are more likely to _____ with the solvent at higher concentrations. Therefore there are _____ chances for collisions (more reacting particles, the easier the reactants are to _____ in the same container) and so the rate increases meaning _____ volume and pressure are important factors. Increasing the volume of a container decreases the _____ of gases. This means they are more likely to collide with each other. This increases the _____ It also increases the _____ because reacting particles collide with each other more frequently.
