HUMAN ANATOMY AND PHYSIOLOGY

Study of the human organism and its internal body

Anatomy

The study of the structure of the human body and its parts.

Physiology

The study of the function of the human body and its parts.

Structural levels

Studying the human body at the cellular, tissue, organ, and system levels.

- 1. **Cellular level** - study of the structure and function of cells.
- 2. **Tissue level** - study of the structure and function of tissues.
- 3. **Organ level** - study of the structure and function of organs.
- 4. **System level** - study of the structure and function of systems.
- 5. **Organism level** - study of the structure and function of the whole organism.

CELLS AND TISSUES

Cells are the basic units of structure and function of the human body. They are made up of a nucleus and cytoplasm.

Organization of human body

The human body is organized into a hierarchy of structural levels.

Cellular level - study of the structure and function of cells.
Tissue level - study of the structure and function of tissues.
Organ level - study of the structure and function of organs.
System level - study of the structure and function of systems.

- 1. **Cellular level** - study of the structure and function of cells.
- 2. **Tissue level** - study of the structure and function of tissues.
- 3. **Organ level** - study of the structure and function of organs.
- 4. **System level** - study of the structure and function of systems.

The **epithelium** is the outermost layer of cells that covers the body. It is made up of a single layer of cells.

Epithelium - the outermost layer of cells that covers the body. It is made up of a single layer of cells.

ORGANS

Organs are made up of different tissues that work together to perform a specific function. They are made up of different tissues that work together to perform a specific function.

Organ systems

Organ systems are made up of different organs that work together to perform a specific function. They are made up of different organs that work together to perform a specific function.

Organ systems

Study of the function of the human body.

ORGAN SYSTEMS

Organ systems are made up of different organs that work together to perform a specific function. They are made up of different organs that work together to perform a specific function.

Organ systems

- 1. **Digestive system** - study of the function of the digestive system.
- 2. **Circulatory system** - study of the function of the circulatory system.
- 3. **Respiratory system** - study of the function of the respiratory system.
- 4. **Excretory system** - study of the function of the excretory system.
- 5. **Reproductive system** - study of the function of the reproductive system.

NERVOUS SYSTEM

Neurons

- 1. **Neurons** are the basic units of the nervous system. They are made up of a cell body and a long tail-like structure called an axon.
- 2. **Neurons** are the basic units of the nervous system. They are made up of a cell body and a long tail-like structure called an axon.
- 3. **Neurons** are the basic units of the nervous system. They are made up of a cell body and a long tail-like structure called an axon.
- 4. **Neurons** are the basic units of the nervous system. They are made up of a cell body and a long tail-like structure called an axon.

Neurons

Neurons are the basic units of the nervous system. They are made up of a cell body and a long tail-like structure called an axon.

Neurons are the basic units of the nervous system. They are made up of a cell body and a long tail-like structure called an axon.
