Petrill, Robert Plomin, John C. DeFries, John K. Hewitt, 2003-03-27 Some of the most intriguing issues in the study of cognitive social emotional and physical development arise in the debate over nature versus nurture a debate difficult to resolve because it is difficult to separate the respective contributions of genes and environment to development The most powerful approach to this separation is through longitudinal adoption studies The Colorado Adoption Project CAP is the only longitudinal adoption study in existence examining development continuously from birth to adolescence which makes it a unique powerful and tremendously valuable resource CAP is an ongoing assessment of 245 adopted children and 245 biological control children assessed from birth to early adolescence This book is the fourth in a series describing CAP results

This latest volume edited by four eminent researchers in developmental psychology builds on the large body of research already generated by investigating the role of genes and environments on early adolescent development. Because it is the only volume on the most comprehensive investigation of the effect of genes and environments on early adolescent development, this work will be invaluable to researchers in developmental cognitive and social psychology. The Concept of Defense Mechanisms in Contemporary Psychology Uwe Hentschel, Gudmund J.W. Smith, Wolfram Ehlers, Juris G.

Draguns, 2012-12-06 What is the scientific status and the truth value of the concept of defense mechanisms? Among contemporary psychologists, three types of answers to this question may be expected. Some would wholeheartedly endorse the theoretical, clinical, and research value of this notion; others would reject it outright. Between these two extremes, a large number of observers, perhaps the majority, would suspend their judgment. Their attitude, compounded of hope and doubt, would capitalize on defense as an interesting and promising concept. At the same time, these psychologists would express skepticism and disappointment over its clinical limitations, theoretical ambiguity, and research failures. The present volume is primarily addressed to the audience of hopeful skeptics: those who have not given up on the notion of defense yet have been frustrated by the difficulties of incorporating it into the modern streamlined structure of psychology. To this end, we have brought together theoretical and empirical contributions germane to defense, together with reports about their applications to clinical and personality assessment, especially in relation to psychopathology, psychosomatics, and psychotherapeutic intervention.
