Women Scientists in America Margaret W. Rossiter, 2012-04-02 This survey of female scientists in recent American history offers compelling data alongside the multiple stories of individual women. Science The third volume of Margaret W. Rossiter's landmark survey of the history of American women scientists focuses on their pioneering efforts and contributions from 1972 to the present. Central to this story are the struggles and successes of women scientists in the era of affirmative action. Scores of previously isolated women scientists were suddenly energized to do things they had rarely if ever done before. Form organizations and recruit new members start rosters and projects put out newsletters confront authorities and even fight and win lawsuits. Rossiter follows the major activities of these groups in several fields from engineering to the physical biological and social sciences and their campaigns to raise consciousness see legislation enforced lobby for passage of the Equal Rights Amendment and serve as watchdogs of the media. This comprehensive volume also covers the changing employment circumstances in the federal government academia industry and the nonprofit sector and discusses contemporary battles to increase the number of women members of the National Academy of Science and women presidents of scientific societies. In writing this book Rossiter mined nearly one hundred previously unexamined archival collections and more than fifty oral histories. With the thoroughness and resourcefulness that characterize the earlier volumes she recounts the rich history of the courageous and resolute women determined to realize their scientific ambitions.

Geophysical Hazards Tom Beer, 2010-06-25 The International Year of Planet Earth IYPE was established as a means of raising worldwide public and political awareness of the vast though frequently under used potential the Earth Sciences possess for improving the quality of life of the peoples of the world and safeguarding Earth s rich and diverse environments The International Year project was jointly initiated in 2000 by the International Union of Geological Sciences IUGS and the Earth Science Division of the United Nations Educational Scienti c and Cultural Organisation UNESCO IUGS which is a Non Governmental Organisation and UNESCO an Inter Governmental Orga sation already shared a long record of productive cooperation in the natural sciences and their application to societal problems including the International Geoscience Programme IGCP now in its fourth decade With its main goals of raising public

awareness of and enhancing research in the Earth sciences on a global scale in both the developed and less developed countries of the world two operational programmes were demanded In 2002 and 2003 the Series Editors together with Dr Ted Nield and Dr Henk Schalke all four being core members of the Management Team at that time drew up outlines of a Science and an Outreach Programme In 2005 following the UN proclamation of 2008 as the United Nations International Year of Planet Earth the Year grew into a triennium 2007 2009

Pollution Assessment for Sustainable Practices in Applied Sciences and Engineering Abdel-Mohsen O. Mohamed, Evan K. Paleologos, Fares Howari, 2020-10-25 *Pollution Assessment for Sustainable Practices in Applied Sciences and Engineering* provides an integrated reference for academics and professionals working on land air and water pollution The protocols discussed and the extensive number of case studies help environmental engineers to quickly identify the correct process for projects under study The book is divided into four parts each of the first three covers a separate environment Geosphere Atmosphere and Hydrosphere The first part covers ground assessment contamination geo statistics remote sensing GIS risk assessment and management and environmental impact assessment The second part covers atmospheric assessment topics including the dynamics of contaminant transport impacts of global warming indoor and outdoor techniques and practice The third part is dedicated to the hydrosphere including both the marine and fresh water environments Finally part four examines emerging issues in pollution assessment from nanomaterials to artificial intelligence There are a wide variety of case studies in the book to help bridge the gap between concept and practice Environmental Engineers will benefit from the integrated approach to pollution assessment across multiple spheres Practicing engineers and students will also benefit from the case studies which bring the practice side by side with fundamental concepts Provides a comprehensive overview of pollution assessment Covers land underground water and air pollution Includes outdoor and indoor pollution assessment Presents case studies that help bridge the gap between concepts and practice

UNEP Year Book 2009 United Nations, 2009-02 *UNEP Year Book 2009* New Science and Developments in our Changing Environment presents work in progress on scientific understanding of global environmental change as well as foresight about possible issues on the horizon The aim is to raise awareness of the interlinkages among environmental issues that can accelerate the rates of change and threaten human wellbeing The chapters of the Year Book track the same trajectory as our awareness of environmental change Transformations are inherent to this trajectory and are taking place on many fronts from industrial agriculture to eco agriculture from a wasteful society towards a resource efficient one and from a triad of competing interests among civil society the private sector and governments to a more cooperative model based on mutual benefits

Climate Change and the Media Tammy Boyce, Justin Lewis, 2009 It is now more than a quarter of a century since the Intergovernmental Panel on Climate Change published their first comprehensive report on the dangers posed by anthropogenic global warming Over the last twenty five years the weight of evidence about the causes and consequences of climate change has become compelling The solutions are fairly simple we must switch to

more sustainable and efficient forms of energy production And yet they remain elusive globally we produce significantly more greenhouse gases now than we did back in 1990 The sad truth is that this inaction has made climate change inevitable the only question that remains is whether we can prevent it spiraling out of control How do we explain this colossal global failure The problem is political rather than scientific we know the risks and we know how to address them but we lack the political will to do so The media are pivotal in this equation they have the power to set the public and the political agenda Climate Change and the Media Volume 2 gathers contributions from a range of international scholars to explore the media's role in our understanding of the problem and our willingness to take action Combined these chapters explain how and why media coverage has to date fallen short in communicating both the science and the politics of climate change They also offer guidance about how the media might shift from being the problem to becoming part of the solution Publisher's website

Climate Change Adaptation in Pacific Countries Walter Leal Filho,2017-02-07 This book showcases vital lessons learned from research field projects and best practice examples with regard to climate change adaptation in countries throughout the Pacific region a part of the planet that is particularly vulnerable to and affected by climate change The book's primary goals are to document the wealth of experiences in the region available today to encourage cross sector interactions among the various stakeholders in the region and to help transfer results to other countries and regions Accordingly it gathers a set of papers presented at a symposium on climate change adaptation held in Fiji in July 2016 focusing on Fostering Resilience and Improving the Quality of Life In these contributions local and international experts present a variety of initiatives showing how Pacific countries are coping with the many problems associated with climate change including initiatives in education and awareness work taking place across the region operational aspects and their implications for policy making and challenges in urban and rural areas

China's African Challenges Sarah Raine,2013-10-18 China's relations with African nations have changed dramatically over the past decade African oil now accounts for more than 30% of China's oil imports and China is Africa's second largest single country trading partner as well as a leading lender and infrastructure investor on the continent Yet these developments are bringing challenges not only for Africa and the West but for China as well This book examines these challenges considering Africa as a testing ground both for Chinese companies going global and for a Chinese government that is increasingly having to deal with issues beyond its shores and immediate control What does China need to do to protect and develop its African engagements against a backdrop of mounting African

expectations concerns from Western actors in Africa and the rival presence of other emerging actors How sustainable is the momentum that China has established in its African ventures China s adaptations to the challenges it is facing in Africa are examined and assessed as are the implications of these changes for China Africa and the West China s African engagements are certainly changing Africa but could they also be changing China **Handbook of the Politics of the Arctic** Leif Christian Jensen, Geir Hønneland, 2015-09-25 The Arctic has again become one of the leading issues on the international foreign policy agenda in a manner unseen since the Cold War Drawing on the perspectives of geo politics and international law this Handbook offers fresh insights and perspectives on the most pressing issues grouped under the headings of political ascendancy climate and environmental issues resources and energy and the response and policies of affected countries

United in Diversity? Jens Alber, Neil Gilbert, 2009-10-07 Since the advent of the European Union politicians have increasingly emphasized the notion of a European social model as an alternative to the American form of market capitalism which is seen as promoting economic growth without regard for solidarity and social progress As this political discourse has advanced social scientists and academic policy analysts have raised questions concerning the extent to which the E U and U S social models exist outside the minds of diplomats and politicians seeking to stitch together a common identity How much unity is there still within Europe after the Eastern enlargements have considerably increased economic and cultural diversity To whatever extent one might discern a distinct set of commonalities that represent the core of a European approach how different are the European characteristics of social economic and political life from those of America Addressing these issues this book systematically analyzes how much European countries and the United States have in common and how much variation we find within the enlarged European Union in eight central spheres of socio economic and political life employment equality mobility educational opportunity integration of immigrants democratic functioning political participation rights to welfare and levels of public spending Drawing on empirical analyses by U S and European scholars who represent multi disciplinary backgrounds each of these topics is put under scrutiny The results of this study illuminate points of convergence and divergence as seen from the perspectives of scholars from both sides of the Atlantic **Low Carbon Transport in Asia** Eric Zusman, Ancha Srinivasan, Shobhakar Dhakal, 2012-03-29 Without the effective participation of developing Asia a climate crisis is certain Within developing Asia the key to averting such a crisis lies in low carbon transport China India and Asia s other emerging economies could promote fuel efficient vehicles public transport and sustainable urban planning Or they could become locked into inefficient vehicles energy intensive infrastructure and suburban sprawl The path they choose will have long term implications for the entire world And it will depend upon the extent to which they adopt a co benefit approach A co benefit approach involves recognizing that some transport policies mitigate greenhouse gases while simultaneously improving urban air quality commuting times and energy security Accounting for these additional benefits can overcome a reluctance to bear the costs of climate actions But it also presents

unique technical financial and institutional challenges to decision makers unaccustomed to optimizing multiple benefits The book represents a pioneering effort to identify and remove barriers to a co benefit approach in developing Asia s transport sector The introductory section makes the case for co benefits in developing Asia s transport sector The second section features analytical frameworks to identify strategies with potential co benefits offering new findings on black carbon and dieselization The third section grounds the analytic work in case studies on fuel switching in Pakistan urban planning in Bandung Indonesia congestion charges in Beijing vehicle restraints in Hanoi and bus rapid transit in Jakarta A final section examines whether a post 2012 climate regime can help transform a rapidly motorizing Asia into a low carbon Asia This book is essential reading for transport policy makers planners and researchers concerned with low carbon transport climate change and development in Asia and the wider world

The Secure and the Dispossessed Nick Buxton, Ben Hayes, 2015-11-20 While the world s scientists and many of its inhabitants despair at the impact of climate change corporate and military leaders see nothing but opportunities For them melting ice caps mean newly accessible fossil fuels borders to be secured from climate refugees social conflicts to be managed and more failed states in which to intervene They are securing their assets at the expense of the planet and its inhabitants The Secure and the Dispossessed looks at these deadly approaches with a critical eye It also considers the flip side that the legitimacy of the elite is under unprecedented pressure from resistance by communities to resource grabs to those creating new ecological and socially just models for managing our energy food and water Topics covered include geoengineering militarism refugee protection greenwashing and the agricultural crisis among others Adaptation and resilience to a climate changed world is desperately needed but the form it will take will affect all of our futures

Contested Waterscapes in the Mekong Region Francois Molle, Tira Foran, Mira Kakonen, 2012-05-04 The catchment area of the Mekong River and its tributaries extends from China through Burma Myanmar Thailand Laos Cambodia and to Vietnam The water resources of the Mekong region from the Irrawaddy and Nu Salween in the west across the Chao Phraya to the Lancang Mekong and Red River in the east are increasingly contested Governments companies and banks are driving new investments in roads dams diversions irrigation schemes navigation facilities power plants and other emblems of conventional development Their plans and interventions should provide some benefits but also pose multiple burdens and risks to millions of people dependent on wetlands floodplains and aquatic resources in particular the wild capture fisheries of rivers and lakes This book examines how large scale projects are being proposed justified and built How are such projects contested and how do specific governance regimes influence decision making The book also highlights the emergence of new actors rights and trade off debates and the social and environmental consequences of water resources development This book shows how diverse and often antagonistic ideologies and interests are contesting for legitimacy It argues that the distribution of decision making political and discursive power influences how the waterscapes of the region will ultimately look and how benefits costs and risks will be distributed These issues are crucial

for the transformation of waterscapes and the prospects for democratizing water governance in the Mekong region The book is part of the action research of the M POWER Mekong Program on Water Environment and Resilience knowledge network Published with IFAD CG AR Challenge Program on Water Food M POWER Project ECHEL EAU and HEINRICH BOLL STIFTUNG Science & Technology Review ,2010 Geomechanical and Petrophysical Properties of Mudrocks E.H. Rutter,J. Mecklenburgh,K.G.
