Aging and the Macroeconomy National Research Council, Division of Behavioral and Social Sciences and Education, Committee on Population, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on the Long-Run Macroeconomic Effects of the Aging U.S. Population, 2013-01-10 The United States

is in the midst of a major demographic shift In the coming decades people aged 65 and over will make up an increasingly large percentage of the population The ratio of people aged 65 to people aged 20 64 will rise by 80% This shift is happening for two reasons people are living longer and many couples are choosing to have fewer children and to have those children somewhat later in life The resulting demographic shift will present the nation with economic challenges both to absorb the costs and to leverage the benefits of an aging population Aging and the Macroeconomy Long Term Implications of an Older Population presents the fundamental factors driving the aging of the U S population as well as its societal implications and likely long term macroeconomic effects in a global context The report finds that while population aging does not pose an insurmountable challenge to the nation it is imperative that sensible policies are implemented soon to allow companies and households to respond It offers four practical approaches for preparing resources to support the future consumption of households and for adapting to the new economic landscape

The Physics of Reality Richard L. Amoroso, 2013 A truly Galilean class volume this book introduces a new method in theory formation completing the tools of epistemology It covers a broad spectrum of theoretical and mathematical physics by researchers from over 20 nations from four continents Like Vigier himself the Vigier symposia are noted for addressing avant garde cutting edge topics in contemporary physics Among the six proceedings honoring J P Vigier this is perhaps the most exciting one as several important breakthroughs are introduced for the first time The most interesting breakthrough in view of the recent NIST experimental violations of QED is a continuation of the pioneering work by Vigier on tight bound states in hydrogen The new experimental protocol described not only promises empirical proof of large scale extra dimensions in conjunction with avenues for testing string theory but also implies the birth of the field of unified field mechanics ushering in a new age of discovery Work on quantum computing redefines the qubit in a manner that the uncertainty principle may be routinely violated Other breakthroughs occur in the utility of quaternion algebra in extending our understanding of the nature of the fermionic singularity or point particle There are several other discoveries of equal magnitude making this volume a must have acquisition for the library of any serious forward looking researchers

Renewable Energy Applications for Freshwater Production Jochen Bundschuh, Jan Hoinkis, 2012-07-02 Worldwide many regions have a great potential to cover part of their pressing water needs by renewable energy powered water treatment processes using either thermal or membrane based technologies Not only arid and semiarid regions are increasingly suffering from water shortage but also many other regions face a limitation of freshwater resources either by increasing contamination of surface water bodies or groundwater resources unsuitable for drinking and irrigation purposes either due to their high grade of mineralization or their contents of toxic components In many areas without centralized water supply treatment techniques using locally available renewable energy resources such as wind solar and geothermal can provide an economical social and environmentally sustainable option for clean water production from seawater and from highly mineralized or otherwise unsuitable ground and surface water This book provides an overview on

possible cost efficient techniques and application opportunities for different scales and shows why the implementation of these technologies faces numerous technological economic and policy barriers and provides suggestions how they can be overcome It serves as a synoptic compendium of the fundamentals of freshwater production using renewable energies applicable to all types of water ranging from brackish to marine water and also including industrial and communal residual water The book is aimed at professionals academics and decision makers worldwide working in the areas of water resources water supply land planning energy planning greenhouse gases emission mitigation and rural development An Informed Cosmos Peter S. Williams,2023-07-14 After a substantial author s preface recounting the author s life journey with the question of science and design in nature An Informed Cosmos pulls together essays that jointly cover the core arguments for a scientific theory of intelligent design Along with a foreword by philosopher of science and leading design theorist Stephen C Meyer and a wide range of recommended resources An Informed Cosmos offers an informed overview of the contemporary case for intelligent design **Reimagining Intervention in Young Lives** Karen R. Foster,Dale C. Spencer,2012-08-10 Poverty and unemployment are on the rise among Canadian youth Reimagining Intervention in Young Lives looks at the issue from the perspective of those most affected revealing the difficulties young people encounter with the support system In depth interviews with forty five young people in Ottawa reveal that solutions do exist predicated on recognition that the problem lies not with incorrigible youth but with a social aid structure that imposes barriers to success Intervention is necessary argue the authors but not so much in the lives of young people as in the faulty structures that incorrectly presume how they interpret risk poverty and their own potential **Climate Change from the Streets** Michael Méndez,2020-01-07 An urgent and timely story of the contentious politics of incorporating environmental justice into global climate change policy Although the science of climate change is clear policy decisions about how to respond to its effects remain contentious Even when such decisions claim to be guided by objective knowledge they are made and implemented through political institutions and relationships and all the competing interests and power struggles that this implies Michael Méndez tells a timely story of people place and power in the context of climate change and inequality He explores the perspectives and influence low income people of color bring to their advocacy work on climate change In California activist groups have galvanized behind issues such as air pollution poverty alleviation and green jobs to advance equitable climate solutions at the local state and global levels Arguing that environmental protection and improving public health are inextricably linked Méndez contends that we must incorporate local knowledge culture and history into policymaking to fully address the global complexities of climate change and the real threats facing our local communities Evolving Corporate Education Strategies for Developing Countries: The Role of Universities Narasimharao, B. PanduRanga,Kanchugarakoppal, S. Rangappa,Fulzele, Tukaram U.,2013-01-31 Educational commissions continue to press the need for growth in higher education In particular universities in developing countries persist in putting their academic theory into practice by aiming to integrate their intellectual and

cultural traditions into higher education *Evolving Corporate Education Strategies for Developing Countries The Role of Universities* presents the theories and opportunities for integrating corporate education into traditional universities as well as highlighting the professional development in different subject areas This book provides relevant research important for policy makers practitioners and scholars of higher education *Native Games* Chris Hallinan, Barry Judd, 2013-07-19
