Particle Physics From Underground To Heaven - Proceedings Of The Johns Hopkins Workshop On Current Problems In Particle Theory 15

Gabor Domokos, Susan Kovesi-domokos, 1992-03-04 This book addresses the theoretical aspects of the search for new physics beyond the Standard Model of elementary particle interactions Both accelerator based and non accelerator astro particle physics searches are discussed The contents of the Proceedings are unique in its emphasis on the interaction between these two aspects of particle physics

Identification Of Dark Matter, The - Proceedings Of The First International Workshop

Neil J C Spooner, 1997-08-02 There can be little doubt now that 90 99% of the Universe comprises dark matter Hence it is of critical importance now not just to pursue further evidence for its existence but rather to identify what the dark matter is Assessment of progress in this area was the objective of the first International Workshop on the Identification of Dark Matter in particular to consider what techniques both observational and experimental are currently being used how successful they are now and what new techniques will improve the prospects of identifying the likely candidates The meeting included reviews on major particle astrophysics topics in dark matter but was largely devoted to short contributed talks on new work in the field This book is the written proceedings of the meeting

Eileen C. Brennan, 1988 Testing The Standard Model (Tasi 1990) - Proceedings Of The 1990 Theoretical Advanced Study Institute In Elementary Particle Physics Mirjam Cvetič, Paul G Langacker, 1991-06-18 The Theoretical Advanced Study Institute TASI has become the major summer school for advanced students in elementary particle theory in the United States offering courses in particle

theory phenomenology and mathematical physics The theme of the 1990 school Testing the Standard Model was chosen because of the many new high precision results that had recently become available from the TEVATRON SLC and LEP The goal was to explore the theoretical background and implications of experiments at these and future facilities both in and

Kapusta,1994 Two photon physics i e photon photon collisions in electron positron colliders a relatively new field in elementary particle physics has become very popular in the last 20 years Many experiments have been performed in this field and the theoretical implications in particular in quantum chromodynamics have been studied in much detail Nine international workshops devoted to two photon physics have taken place between 1973 and 1992 This meeting was particularly timely since a new generation of electron positron colliders is presently being built or planned These colliders will involve a large spectrum of beam energies but their common characteristics should be a high particle flux luminosity This should allow for measuring many new phenomena as well as for studying known processes with much higher precision than before Particularly promising is the prospect of building a dedicated high energy photon collider this should become possible using a laser technique allowing for the conversion of a linear electron beam into a photon beam Over 60 physicists both experimentalists and theorists mainly from European countries France Britain Italy Germany Russia as well as Sweden and Switzerland discussed these new possibilities at the above meeting Over 30 talks were presented and many extended debates took place **Report Upon the Commercial Relations of the United States with Foreign Countries** United States.
