

Reptiles: Classification Study Guide

March 28, 2023

Introduction

The four classes of reptilia are:

1. Crocodilia (crocodiles and alligators),
2. Sphenodontia (tuataras),
3. Squamata (lizards and snakes), and
4. Testudines.

- Crocodilia has 25 species, Sphenodontia has two species, Squamata has roughly 9,200 species, and Testudines has about 325 species.

1. Crocodilia

- Crocodilia emerged as a separate lineage during the middle Triassic, with alligators, crocodiles, gharials, and caimans as living species.
- Crocodilians may be found in Africa, South America, Southern Florida, Asia, and Australia's tropics and subtropics.
- They live in freshwater, saltwater, and brackish ecosystems, including rivers and lakes, and spend most of their life in water.
- Crocodiles are derived from terrestrial reptiles. Therefore they can still walk and sprint.

Kenneth Dodd, 2016 This practical handbook of reptile field ecology and conservation brings together a distinguished international group of reptile researchers to provide a state of the art review of the many new and exciting techniques used to study reptiles. The authors describe ecological sampling techniques and how they are implemented to monitor the conservation status and population trends of snakes, lizards, tuatara, turtles and crocodilians throughout the world. Emphasis is placed on the extent of statistical inference and the biases associated with different techniques and analyses. The chapters focus on the application of field research and data analysis for achieving an understanding of reptile life history, population dynamics, movement patterns, thermal ecology, conservation status and the relationship between reptiles and their environment. The book emphasises the need for thorough planning and demonstrates how a multi-dimensional approach incorporates information related to morphology, genetics, molecular biology, epidemiology, statistical modelling, animal welfare and biosecurity. Although accentuating field sampling, sections on experimental applications in laboratories and zoos, thermal ecology, genetics, landscape ecology, disease and biosecurity and management options are included. Much of this information is scattered in the scientific literature or not readily available and the intention is to provide an affordable comprehensive synthesis for use by graduate students, researchers and practising conservationists worldwide.
