

Chapter 2 Resistive Circuits

Quiz – Exercise 2.25 - Find Norton Equivalent Circuits

(b) We cannot find the Thévenin resistance by zeroing the sources because we have a controlled source. Thus we find the open-circuit voltage and the short-circuit current.

$$\frac{v_o - 2v_x}{10} + \frac{v_o}{30} = 2 \quad v_o = 3v_x$$

Solving we find $V_o = v_o = 30 \text{ V}$.

Now we find the short-circuit current:

$$2v_x + v_x = 0 \Rightarrow v_x = 0$$

Therefore $i_{sc} = 2 \text{ A}$. Then we have $R_t = v_o / i_{sc} = 15 \Omega$.

Resistive Circuits Diagnostic Test:

Testing and Diagnosis of Analog Circuits and Systems Ruey-wen Liu, 2012-12-06 IS THE TOPIC ANALOG TESTING AND DIAGNOSIS TIMELY Yes indeed it is Testing and Diagnosis is an important topic and fulfills a vital need for the electronic industry The testing and diagnosis of digital electronic circuits has been successfully developed to the point that it can be automated Unfortunately its development for analog electronic circuits is still in its Stone Age The engineer's intuition is still the most powerful tool used in the industry There are two reasons for this One is that there has been no pressing need from the industry Analog circuits are usually small in size Sometimes the engineer's experience and intuition are sufficient to fulfill the need The other reason is that there are no breakthrough results from academic research to provide the industry with critical ideas to develop tools This is not because of a lack of effort Both academic and industrial research groups have made major efforts to look into this problem Unfortunately the problem for analog circuits is fundamentally different from and much more difficult than its counterpart for digital circuits These efforts have led to some important findings but are still not at the point of being practically useful However these situations are now changing The current trend for the design of VLSI chips is to use analog digital hybrid circuits instead of digital circuits from the past Therefore even though the analog circuit may be small the total circuit under testing is large
