A hydro-economic methodology for the food-energy-water nexus Justin S. Baker, George L. Van Houtven, Fekadu Moreda, Jennifer Hoponick Redmon, Yongxia Cai, Christopher Wade, Andrew "AJ" Kondash, Candise Henry, 2021-05-27 Growing global water stress caused by the combined effects of growing populations increasing economic development and climate change elevates the importance of managing and allocating water resources in ways that are economically efficient and that account for interdependencies between food production energy generation and water networks often referred to as the food energy water FEW nexus To support these objectives this report outlines a replicable hydro economic methodology for assessing the value of water resources in alternative uses across the FEW nexus including for agriculture energy production and human consumption and maximizing the benefits of these resources through optimization analysis The report's goal is to define the core elements of an integrated systems based modeling approach that is generalizable flexible and geographically portable for a range of FEW nexus applications The report includes a detailed conceptual framework for assessing the economic value of water across the FEW nexus and a modeling framework that explicitly represents the connections and feedbacks between hydrologic systems e.g. river and stream networks and economic systems e.g. food and energy production The modeling components are described with examples from existing studies and applications The report concludes with a discussion of current limitations and potential extensions of the hydro economic methodology

Software Engineering of Fault Tolerant Systems P. Pelliccione, 2007 In architecting dependable systems what is required to improve the overall system robustness is fault tolerance Many methods have been proposed to this end the solutions are usually considered late during the design and implementation phases of the software life cycle e.g. Java and Windows NT exception handling thus reducing the effectiveness error and fault handling Since the system design typically models only normal behaviour of the system while ignoring exceptional ones the implementation of the system is unable to handle abnormal events Consequently the system may fail in unexpected ways due to faults It has been argued that fault tolerance management during the entire life cycle improves the overall system robustness and that different classes of threats need to be identified for and dealt with at each distinct phase of software development depending on the abstraction level of the software system being modelled This book builds on this trend and investigates how fault tolerance mechanisms can be applied when engineering a software system In particular it identifies the new problems arising in this area introduces the new models to be applied at different abstraction levels defines methodologies for model driven engineering of such systems and outlines the new technologies and validation and verification environments supporting this *Current Issues on Digital Transformation, Corporate Entrepreneurship, and Coopetition* Anna Ujwary-Gil, 2024-01-01 An integrated PLS SEM model on the interplay of antecedents and moderators driving corporate entrepreneurship activity in South Africa PURPOSE Corporate entrepreneurship CE is a multi faceted phenomenon and although there is extant research on CE there are knowledge gaps that warrant a deeper understanding Indeed focusing solely on independent variables overlooks the extent to which CE

activities are mutually and reciprocally supportive We align our article with research calls for theory building which provides a novel understanding of the dynamic complexity of the CE process

METHODOLOGY In this regard we formulate and empirically evaluate an integrated CE model that reflects the integrative complexity of the antecedents driving CEA The study context is the South African banking sector where primary data n 312 is obtained via a structured survey Four meta hypotheses and several sub hypotheses reflecting the organizational individual and environmental level antecedents are tested using partial least squares structural equation modeling PLS SEM

FINDINGS The main study finding validates that corporate strategy is the bedrock of CEA The results also reveal that entrepreneurial strategy entrepreneurial structure transformational leadership organizational resources and an entrepreneurial mindset are significant predictors of CEA

IMPLICATIONS Practical implications highlight that it is important for managers to consider the configuration of the predictors within the CE model which function as pathways to entrepreneurial corporate strategy

ORIGINALITY AND VALUE Our study makes a unique contribution by developing and testing an integrated and comprehensive model reflecting the dynamic complexity of the antecedents driving CEA It is anticipated that the results will allow researchers to compare and examine comparable antecedents to CEA and their applicability in global country contexts

Keywords corporate entrepreneurship antecedents entrepreneurial strategy organizational resources transformational leadership entrepreneurial mindset partial least squares structural equation modelling PLS SEM South Africa Pushing coopetition research further Understanding relevance and operationalization of the attributes of coopetition strategies and cooperative relationships

PURPOSE Although coopetition was defined three decades ago and is intensively investigated its theoretical and research cognition remains far from thoroughly understood The lack of conceptual consistency prevents researchers from conducting comparable research leading to more generalizable results and thus from building coherent knowledge This study addresses the above shortcoming by the development of operationalizations of two types of attributes assigned to coopetition strategic attributes characterizing coopetition strategies and relational attributes characterizing cooperative relationships

METHODOLOGY In our study we adopted a two step research process consisting of qualitative verification of a list of 8 coopetition attributes 2 strategic and 6 relational identified in prior literature as relevant for coopetition success and the development of integrative conceptualization and measurement approaches for them The verification was conducted through focus group interviews with scholars experienced in coopetition research and senior managers from firms adopting coopetition strategies The measurement approaches for the positively verified attributes were developed through the integration of 1 approaches used so far in coopetition literature 2 approaches used to date in the literature on the features of inter organizational relationships and 3 approaches that emerged during the focus group interviews

FINDINGS This study shows two strategic i e dynamics and paradoxicality and six relational i e asymmetry complexity intensity mutual dependence strength and tensions coopetition attributes as heterogeneously relevant for coopetition success and offers multi item

operationalizations for them derived from a combination of prior literature and qualitative research

IMPLICATIONS Our paper shows strategic and relational attributes of coopetition as theoretically and practically relevant for coopetition success

ORIGINALITY AND VALUE As a contribution this study offers scientifically grounded operationalizations of eight attributive success factors of coopetition The developed measurement proposals can find valuable applications in two ways First coopetition researchers can use them in their studies and a consistent measurement approach will allow for the comparison of research results bringing us closer to drawing more general conclusions Second coopetition practitioners can use these proposals when managing coopetition for instance to evaluate monitor and intentionally shape them to make coopetition more successful

Keywords coopetition focus group interviews operationalization measurement scale cooperative relationships coopetition strategies Guiding incumbent companies in navigating digital transformations A qualitative study on structural ambidexterity and strategic leadership

PURPOSE Despite digital transformation being a focus topic for incumbent companies organizational structures are a significant barrier to their success Referring to the positive correlation between ambidexterity and digital innovation our research provides guidance on structural ambidexterity for incumbent companies Previous research has barely differentiated between exploration and exploitation in digital transformation In the present paper we fill part of this research gap by focusing on structural ambidexterity in digital transformations and providing guidance on how incumbent companies can overcome organizational challenges

METHODOLOGY Our research is based on an explorative research design with 33 semi structured interviews that allow in depth information The interview partners were selected using purposive sampling and represented different industry and hierarchy levels All of them have been in a position related to digital transformation in an incumbent company for the last two years We ensure scholarly rigor using thematic analysis to analyze our data

FINDINGS Our decision tree guides separation or integration based on the closeness of digital activities to the core business and the association of the activities to exploration or exploitation Additionally we recommend considering the digital maturity grade in the decision making Developing a cross functional digital transformation strategy and pursuing a balanced portfolio fosters ambidexterity in digital transformation Clear responsibilities collaborative decision making candidate selection and collaboration with IT are essential leadership activities

IMPLICATIONS for theory and practice Our research expands the existing research on digital transformations of incumbent companies We specifically contribute to the limited details on how to separate digital activities considering an exploration exploitation perspective Our study guides practitioners to address one of their major challenges in digital transformations with the help of our decision tree

ORIGINALITY AND VALUE Based on the positive correlation between ambidexterity and digital innovation our study contributes to the existing research by providing in depth knowledge of structural ambidexterity in digital transformations This detailed information is essential to provide knowledge on enabling the positive correlation between ambidexterity and innovation in the context of structural ambidexterity

Keywords digital transformation

Leveraging green innovation from big data analytics Examining the role of resource orchestration and green dynamic capabilities PURPOSE The notion of big data analytics BDA has received increased attention from both researchers and managers Keeping in view the significance of BDA the current research aims to examine the role of BDA capability to leverage firm green innovation GI Drawing from the dynamic capability view current study suggests that BDA capability prompts green dynamic capabilities DCs enabling organizations to attain GI successfully Particularly present study proposes that BDA analytics prompt GI directly as well as through green DCs Moreover this study also draws from complementarity perspective and proposes that resource orchestration capability ROC is likely to enhance the effectiveness of green DCs in eliciting GI Thus the objectives of the current study are threefold first it aims to unveil the role of BDA capability in prompting GI second it examines the mediating role of green DCs for the relationship between BDA capability and GI and third this research examines the moderating effect of ROC to examine if it strengthens the effects of green DCs METHODOLOGY This study involves testing hypotheses using primary data collected by using the method of survey questionnaire The data were collected from 291 Pakistani organizations Pakistan is an emerging economy where businesses are responsible for substantial amounts of carbon di oxide and greenhouse gasses GHG emissions Therefore Pakistani organizations serve as a suitable context for the study The respondent organizations were from both the manufacturing and service sectors PLS SEM was employed as an analytical approach for testing the hypotheses Construct validity and reliability were confirmed prior to hypotheses testing FINDINGS Results demonstrate that BDA capability positively affects GI 0 33 p
