dimensional organisation of chromatin in the nucleus These are discussed in the context of embryological development cancer and imprinting disorders and include examples of epigenetic changes that can be used in diagnosis prediction of therapeutic response prognostication or disease monitoring Finally for those wishing to implement epigenetic testing in a diagnostic setting the book includes a case study that illustrates the clinical utility of epigenetic testing **Host-microbe**

Harvey, Jochen C. Meier, Christopher Alan Reid, 2022-04-04 Fighting Fate Justin Yerbury, 2023-06-13 Justin Yerbury made a promise to his mother while she was dying of motor neurone disease MND that he would do everything he could to find a cure MND had already taken several members of Justin's family and he learned that they carried a rare genetic form of the disease that gave them a fifty-fifty chance of inheritance Desperate to help his loved ones Justin went to university to study science eventually becoming a professor of molecular biology at the University of Wollongong and one of the world's leading experts on MND While in New York delivering a lecture on his groundbreaking research Justin felt his thumb stop working the beast that had lurked so long in the shadows had caught up with him Now 99 per cent paralysed and able to move only his eyeballs Justin refuses to yield With eye tracking software he has written his extraordinary memoir to shine light on this terrible disease and to show that even in the bleakest of moments there is always a reason to keep fighting All proceeds from this book will be donated to Fight MND Influenza Virus Vaccines and Immunotherapies Arun Kumar, Shakti Singh, 2016-03-15 Influenza virus infections lead to thousands of deaths worldwide annually and billions of dollars economic burden Despite continuing advances in our understanding of the immune evasion mechanism the disease remains one of the foremost threats for human beings Traditional vaccines attenuated and inactivated mainly provide protection by inducing virus neutralizing antibodies targeting ever-changing surface antigens Haemagglutinin HA and Neuraminidase NA Due to genetic shift and immune selection pressure prevalence of circulating influenza virus subtypes changes every year Therefore mismatch between circulating strain and vaccine strain can critically affect the success rate of these conventional flu vaccines and requires continuous monitoring of circulating influenza virus subtypes and change in the vaccine formulations accordingly The collective limitations of existing flu vaccines urgently call for the development of a novel universal vaccine that might provide the required protective immunity to a range of influenza virus subtypes New approaches are being investigated mainly targeting conserved regions of flu proteins Some of these approaches include universally conserved epitopes of HA nucleoprotein NP capsid protein M1 and ion channel protein M2 that induced strong immune responses in animal models Some attention and progress appears to be focused on vaccines based on the M2 ectodomain M2e employing a variety of constructs adjuvants and delivery systems including M2e hepatitis B core antigen flagellin constructs and virus-like particles VLP Animal studies with these M2e candidate vaccines demonstrated that these vaccine candidates can prevent severe illness and death but not infection which may pose difficulties in both the evaluation of clinical efficacy and approval by the regulatory authorities VLP vaccines appear to be promising but still are

mostly limited to animal studies The discovery and development of new and improved vaccines have been greatly facilitated by the application of new technologies The use of nucleic acid based vaccines to combine the benefits of in situ expression of antigens with the safety of inactivated and subunit vaccines has been a key advancement Upon their discovery more than 20 years ago nucleic acid vaccines promised to be a safe and effective mean to mimic immunization with a live organism vaccine particularly for induction of T cell immunity In addition the manufacturing of nucleic acid based vaccines offered the potential to be relatively simple inexpensive and generic Reverse Vaccinology and in silico designing of vaccines are very innovative approaches and being considered as future of vaccines Furthermore various immuno therapeutic agents also being developed to treat and minimize immuno pathological damage in patients suffering from life threatening complications For the treatment of such pathological conditions various novel approaches such as administration of immune suppressive cytokines blocking co stimulatory signals or activating co inhibitory signal of T cell activation are being tested both in lab and clinics The Research Topic on influenza virus vaccine and therapeutics will give an insight in to the current status and future scope of these new innovative approaches and technologies Moreover these new methods will also serve as a reference tool for the development of future vaccines against several other pathogens Frontiers in Medicinal Chemistry: Volume 5
