Polya se teorie

- Sy teorie leer oor probleemoplossing

Verstaan → ontwerp 'n strategie → implementeer → reflekteer

Beginsel 1: begrip van die probleem

Vra die leerders die volgende

1. Verstaan jy al die woorde?
2. Wat is die sleutelwoorde?
3. Kan jy dit probleem in u eie woorde omskryf?

Some learners may think that as learners to work on a problem, they should first understand the problem. However, this is not always the case. Some learners may not understand the problem at first, but as they work on it, they may realize that they do understand it. This is why it is important to ask learners to explain the problem in their own words. This helps the teacher to see if the learner understands the problem. If the learner does not understand the problem, the teacher can help them to understand it. This is why it is important to ask learners to explain the problem in their own words. This helps the teacher to see if the learner understands the problem. If the learner does not understand the problem, the teacher can help them to understand it.

3. Teaching through problem-solving

- Learners learn maths through real contexts, problems, situations and models
- The context and model allows learners to construct meaning about the concept
- Opposite of teaching for problem-solving approach

most ideal approach

The role of the teacher in problem solving

- The teacher's task is no less demanding because learners do the maths - It is actually very demanding.
- Teachers need to pick out high-quality tasks that will allow learners to learn the content by finding their own strategies and solutions.
- Teachers need to ask well-thought-out questions that will allow learners to modify and relate their strategies.
- Teachers need to listen to learners' responses and observe their work and, at the spur of the moment, determine how to expand and formalise learners' thinking.
