creating a new JConsole plug in creating a scripted JEditorPane component invoking and communicating with JavaFX Script and JRuby scripts from a Java application that interacts with the Scripting API signing an arbitrary XML document and validating a signed document's XML signature and accessing an existing web service are examples With a few exceptions each of chapters 2 through 10 alphabetically organizes its topics for convenient access Furthermore all 10 chapters end with a Test Your Understanding section that provides questions and exercises to help you reinforce your understanding of what you have read Additional features are covered in the first three appendices The first appendix introduces you to annotation types for annotation processors Common Annotations 1.0 and several tables that conveniently organize additional annotation types that are new to Java SE 6 The second appendix explores changes made to various Java tools For example the Java compiler tool now supports annotation processing you'll learn how to take advantage of this capability by writing your own annotation processor Another example you'll learn how to interact with the command line script shell The third appendix looks at a variety of performance enhancements ranging from a fix for the gray rect problem to single threaded rendering The second to last appendix provides answers and code to all of the questions and exercises in the various Test Your Understanding sections The final appendix anticipates Java SE 7 by looking at features most likely to make the cut including closures the Java Module System and the Swing Application Framework By the time you finish this book you will have mastered most of what's new and improved in Java SE 6 Although a few features such as multiple gradient paints and an in depth look at StAX are not covered you will find a growing list of articles devoted to these additional topics on the author's website JavaJeff.mh.ca Follow the links at the bottom of the website's Articles page

Biological and Medical Data Analysis José María Barreiro, Fernando Martín-Sánchez, Víctor Maojo, Ferran Sanz, 2004-12-21 This year the 5th International Symposium on Medical Data Analysis has experimented an apparently slight modification The word biological has been added to the title of the conferences The motivation for this shift goes beyond the wish to attract a different kind of professional It is linked to recent trends to produce a shift within various biomedical areas towards genomics based research and practice For instance medical informatics and bioinformatics are being linked in a synergic area denominated biomedical informatics Similarly patient care is being improved leading to concepts and areas such as molecular medicine genomic medicine or personalized healthcare The

results from different genome projects the advances in systems biology and the integrative approaches to physiology would not be possible without new approaches in data and information processing Within this scenario novel methodologies and tools will be needed to link clinical and genomic information for instance for genetic clinical trials integrated data mining of genetic clinical records and clinical databases or gene expression studies among others Genomic medicine presents a series of challenges that need to be addressed by researchers and practitioners In this sense this ISBMDA conference aimed to become a place where researchers involved in biomedical research could meet and discuss For this conference the classical contents of former ISMDA conferences were updated to incorporate various issues from the biological elds Similarly to the incorporation of these new topics of the conference data analysts will face in this world of genomic medicine and related areas significant challenges in research education and practice
