Undersea Vehicles and National Needs National Research Council, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Committee on Undersea Vehicles and National Needs, 1996-12-19 The United States faces decisions requiring information about the oceans in vastly expanded scales of time and space and from oceanic sectors not accessible with the suite of tools now used by scientists and engineers Advances in guidance and control communications sensors and other technologies for undersea vehicles can provide an opportunity to understand the oceans influence on the energy and chemical balance that sustains humankind and to manage and deliver resources from and beneath the sea This book assesses the state of undersea vehicle technology and opportunities for vehicle applications in science and industry It provides guidance about vehicle subsystem development priorities and describes how national research can be focused most effectively

Freedom's Laboratory Audra J. Wolfe, 2020-08-04 The Cold War ended long ago but the language of science and freedom continues to shape public debates

over the relationship between science and politics in the United States Scientists like to proclaim that science knows no borders Scientific researchers follow the evidence where it leads their conclusions free of prejudice or ideology But is that really the case In Freedom s Laboratory Audra J Wolfe shows how these ideas were tested to their limits in the high stakes propaganda battles of the Cold War Wolfe examines the role that scientists in concert with administrators and policymakers played in American cultural diplomacy after World War II During this period the engines of US propaganda promoted a vision of science that highlighted empiricism objectivity a commitment to pure research and internationalism Working both overtly and covertly wittingly and unwittingly with governmental and private organizations scientists attempted to decide what exactly they meant when they referred to scientific freedom or the US ideology More frequently however they defined American science merely as the opposite of Communist science Uncovering many startling episodes of the close relationship between the US government and private scientific groups Freedom s Laboratory is the first work to explore science s link to US propaganda and psychological warfare campaigns during the Cold War Closing in the present day with a discussion of the 2017 March for Science and the prospects for science and science diplomacy in the Trump era the book demonstrates the continued hold of Cold War thinking on ideas about science and politics in the United States Proceedings 2004 VLDB Conference VLDB,2004-10-08 Proceedings of the 30th Annual International Conference on Very Large Data Bases held in Toronto Canada on August 31 September 3 2004 Organized by the VLDB Endowment VLDB is the premier international conference on database technology Millennial Biology: The National Science Foundation and American Biology, 1975-2005 Donald J. McGraw,2021-01-25 National Science Foundation NSF is a unique federal agency because it supports scientific research financially but does not engage in scientific work itself Its history is known only in part because the NSF is a vibrant expanding and living entity that makes the final telling of its story impossible Much can be learned from its beginning as well as its component parts If the founding of the NSF in 1950 was couched in an era of physics especially atomic physics certainly by the end of the 20th century and the beginning of the 21st biology was and remains the queen of sciences for the predictable future This book highlights the elite status of America s biological sciences as they were funded affected and to a very real degree interactively guided by the NSF It examines important events in the earlier history of the Foundation because they play strongly upon the development of the various biology directorates Issues such as education applied research medical science the National Institutes of Health the beginnings of biotechnology and other matters are also discussed **Blind Landings** Erik M. Conway,2006-11-04 When darkness falls storms rage fog settles or lights fail pilots are forced to make instrument landings relying on technology and training to guide them through typically the most dangerous part of any flight In this original study Erik M Conway recounts one of the most important stories in aviation history the evolution of aircraft landing aids that make landing safe and routine in almost all weather conditions Discussing technologies such as the Loth leader cable system the American National Bureau of Standards system and its descendants

the Instrument Landing System the MIT Army Sperry Gyroscope microwave blind landing system and the MIT Radiation Lab's radar based Ground Controlled Approach system Conway interweaves technological change training innovation and pilots experiences to examine the evolution of blind landing technologies He shows how systems originally intended to produce routine all weather blind landings gradually developed into routine instrument guided approaches Even so after two decades of development and experience pilots still did not want to place the most critical phase of flight the landing entirely in technology's invisible hand By the end of World War II the very concept of landing blind therefore had disappeared from the trade literature a victim of human limitations

History of CERN, III J. Krige, 1996-12-18 The present volume covers the story of the history of CERN from the mid 1960s to the late 1970s The book is organized in three main parts The first containing contributions by historians of science perceives the laboratory as being at the node of a complex of interconnected relationships between scientists and science managers on the staff the users in the member states and the governments which were called upon to finance the organization Parts II and III include chapters by practising scientists The former surveys the theoretical and experimental physics results obtained at CERN in this period while the latter describes the development of the laboratory's accelerator complex and Charpak detection techniques

Spacecraft Dynamics and Control Enrico Canuto, Carlo Novara, Donato Carlucci, Carlos Perez-Montenegro, Luca Massotti, 2018-03-08 Spacecraft Dynamics and Control The Embedded Model Control Approach provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model based control using state space equations as the key paradigm for simulation design and implementation The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems The logic architecture is organized around the embedded model of the spacecraft and its surrounding environment The model is compelled to include disturbance dynamics as a repository of the uncertainty that the control law must reject to meet attitude and orbit requirements within the uncertainty class The source of the real time uncertainty estimation

prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output. The embedded model and the uncertainty estimation feedback noise estimator in the book constitute the state predictor feeding the control law. Asymptotic pole placement exploiting the asymptotes of closed loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator. The design versus the uncertainty class is driven by analytic stability and performance inequalities. The method is applied to several attitude and orbit control problems. The book begins with an extensive introduction to attitude geometry and algebra and ends with the core themes state space dynamics and Embedded Model Control. Fundamentals of orbit attitude and environment dynamics are treated giving emphasis to state space formulation disturbance dynamics state feedback and prediction closed loop stability. Sensors and actuators are treated giving emphasis to their dynamics and modelling of measurement errors. Numerical tables are included and their data employed for numerical simulations. Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations. The suite of the attitude control modes of a GOCE like mission is designed and simulated around the so called mission state predictor. Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding training and application. Simulated results and their graphical plots are developed through MATLAB Simulink code.
