Proceedings of the Fourteenth Annual Conference of the Cognitive Science Society (US) Conference, 2014-05-12 This volume features the complete text of all regular papers posters and summaries of symposia presented at the 14th annual meeting of the Cognitive Science Society Dynamics in Logistics Michael Freitag, Herbert Kotzab, Jürgen Pannek, 2018-02-16 These proceedings contain research presented at the 6th International Conference on Dynamics in Logistics held in February 2018 The integration of dynamics within the modeling planning and control of logistic processes and networks has shown to contribute massively to the improvement of the latter Moreover diversification of markets and demand has increased both the complexity and the dynamic changes of problems within the area of logistics To cope with these challenges it must become possible to identify describe and analyze such process changes Moreover logistic processes and networks must be revised to be rapidly and flexibly adaptable to continuously changing conditions This book presents new ideas to solve such problems offering technological algorithmic and conceptual improvements It primarily addresses researchers and practitioners in the field of industrial engineering and logistics *Psychoanalytical neuroscience:* Exploring psychoanalytic concepts with neuroscientific methods Nikolai Axmacher, Henrik Kessler, Gerd Thomas Waldhauser, 2015-01-09 Sigmund Freud was a trained neuroanatomist and wrote his first psychoanalytical theory in neuroscientific terms Throughout his life he maintained the belief that at some distant day in the future all psychoanalytic processes could be tied to a neural basis We must recollect that all of our provisional ideas in psychology will presumably one day be based on an organic substructure Freud 1914 On Narcissism An Introduction Fundamental Freudian concepts reveal their foundation in the physiological science of his time most importantly among them the concept of libidinous energy and the homeostatic principle of constancy However the subsequent history of psychoanalysis and neuroscience was mainly characterized by mutual ignorance or even opposition many scientists accused psychoanalytic viewpoints not to be scientifically testable and many psychoanalysts claimed that their theories did not need empirical support outside of the therapeutic situation On this historical background it may appear surprising that the recent years have seen an increasing interest in re connecting psychoanalysis and neuroscience in various ways By studying psychodynamic consequences of brain

lesions in neurological patients by investigating how psychoanalytic therapy affects brain structure and function or even by operationalizing psychoanalytic concepts in well controlled experiments and exploring their neural correlates These empirical studies are accompanied by theoretical work on the philosophical status of the neuropsychoanalytic endeavour In this volume we attempt to provide a state of the art overview of this new exciting field All types of submissions are welcome including research in patient populations healthy human participants and animals review articles on some empirical or theoretical aspect and of course also critical accounts of the new field Despite this welcome variability we would like to suggest that all contributions attempt to address one or both of two main questions which should motivate the connection between psychoanalysis and neuroscience and that in our opinion still remain exigent First from the neuroscientific side why should researchers in the neurosciences address psychoanalytic ideas and what is or will be the impact of this connection on current neuroscientific theories Second from the psychoanalytic side why should psychoanalysts care about neuroscientific studies and how can current psychoanalytical theory and practice benefit from their results Of course contributors are free to provide a critical viewpoint on these two questions as well Geospatial Data in a Changing World Tapani Sarjakoski, Maribel Yasmina Santos, L. Tiina Sarjakoski, 2016-05-14 This book collects innovative research presented at the 19th Conference of the Association of Geographic Information Laboratories in Europe AGILE on Geographic Information Coastal Environments and Global Change Gerd Masselink, Roland Science held in Helsinki Finland in 2016 Gehrels, 2014-04-23 The coastal zone is one of the most dynamic environments on our planet and is much affected by global change especially sea level rise Coastal environments harbour valuable ecosystems but they are also hugely important from a societal point of view This book which draws on the expertise of 21 leading international coastal scientists represents an up to date account of coastal environments and past present and future impacts of global change The first chapter of the book outlines key principles that underpin coastal systems and their behaviour This is followed by a discussion of key processes including sea level change sedimentation storms waves and tides that drive coastal change The main part of the book consists of a discussion of the main coastal environments beaches dunes barriers salt marshes tidal flats estuaries coral reefs deltas rocky and glaciated coasts and coastal groundwater and how these are affected by global change The final chapter highlights strategies for coping with coastal change Readership final year undergraduate and postgraduate level students on coastal courses in a wide range subjects including geography environmental management geology oceanography and coastal civil engineering The book will also be a valuable resource for researchers and applied scientists dealing with coastal environments Additional resources for this book can be found at www wiley com go masselink coastal Reader's Guide to the Social Sciences Jonathan Michie, 2014-02-03 This 2 volume work includes approximately 1 200 entries in A Z order critically reviewing the literature on specific topics from abortion to world systems theory In addition nine major entries cover each of the major disciplines political economy management and business human geography politics sociology law

psychology organizational behavior and the history and development of the social sciences in a broader sense
