Abruscato received his Bachelors and Masters Degrees from Trenton State College and his Ph D from The Ohio State University. He presently teaches science curriculum and methods courses at the University of Vermont Burlington. He was inspired by his own teachers to enter the teaching profession and his personal experience as a teacher has enhanced his professional work as a teacher educator. Dr Abruscato has presented hundreds of speeches and workshops across the United States and Canada and has published a variety of science books for children and teachers including *Teaching Children Science and Whizbangers* and *Wonderments: Other Texts to Consider*. **Enriching Teaching and Learning Environments With Contemporary Technologies** Durnali, Mehmet, Limon, İbrahim, 2020-02-07 Educational technologies have revolutionized the learning and teaching environments. Offline, online applications and social media have changed the conventional learning and teaching habits and competencies. In terms of learners, it has been empirically proven that the use of educational technologies in the classroom make learning easier and more enjoyable. On the other hand, it also poses threats to students such as cyberbullying and online addiction. While exploiting the opportunities of technological use in the classroom, educators must also remain vigilant and formulate ways to overcome the challenges and risks brought by technology. *Enriching Teaching and Learning Environments With Contemporary Technologies* is an essential research publication that aims to present exemplary practices of technology use and their management in pedagogical purposes in learning and teaching environments. The book also analyzes problems that may arise and develops policies on educational technologies and the exploitation of technology with pedagogical purposes as part of the discussion to solve these challenges. Featuring a wide range of topics such as augmented reality, mass media and religious education, this book is ideal for educators who want to use technology in class, educational administrators who have responsibilities for developing policies on educational technologies and managing the use of them, and researchers who want to carry out a deep investigation into the subject. Additionally, educational software developers, academicians, instructional designers, curriculum developers, education professionals, and students will also benefit from the research contained within the book. Theoretical Nursing Afaf Ibrahim Meleis, 2011. An additional assumption was that the processes for theory development were new to nursing and hence nurses in graduate programs learned strategies for advancing knowledge from other disciplines. This assumption was debunked with the knowledge that nurses were always engaged in knowledge development driven by their experiences in clinical practice. Because of these assumptions, most of the early writing about theory development was about outlining strategies that should be used rather than strategies that have already been used in the discipline to develop theories. Theorists themselves did not uncover or adequately discuss ways by which they developed their theories; therefore, the tendency was to describe processes that were based on theories developed in other disciplines, mainly the physical and social sciences. And an implicit assumption was made that there should be a single strategy for theory development, some claiming to begin the process from practice and others believing it should be driven by research. Mitchell,Svetlana A. Lyapustina,2013-04-10 The purpose of this publication is to introduce a new simpler and more effective way in which to interpret pharmaceutical aerosol particle size data from orally inhaled products OIPs Currently the compendial and regulatory requirements dictate the need for measurements by full resolution multi stage cascade impactor CI a process that is demanding for the operator time consuming prone to experimental error and challenging for method transfers from one laboratory to another Furthermore we shall show that the current practice of reducing information from mass weighted aerodynamic particle size distribution APSD measurements through the use of CI stage groupings is not the most effective decision making tool for OIP quality control QC in comparison with newly introduced mutually independent efficient data analysis EDA metrics that can be derived either from full resolution or abbreviated impactor measurements

Masters of Mathematics Robert A. Nowlan, 2017-05-13 The original title for this work was Mathematical Literacy What Is It and Why You Need it The current title reflects that there can be no real learning in any subject unless questions of who what when where why and how are raised in the minds of the learners The book is not a mathematical text and there are no assigned exercises or exams It is written for reasonably intelligent and curious individuals both those who value mathematics aware of its many important applications and others who have been inappropriately exposed to mathematics leading to indifference to the subject fear and even loathing These feelings are all consequences of meaningless presentations drill rote learning and being lost as the purpose of what is being studied Mathematics education needs a radical reform There is more than one way to accomplish this Here the author presents his approach of wrapping mathematical ideas in a story To learn one first must develop an interest in a problem and the curiosity to find how masters of mathematics have solved them What is necessary to be mathematically literate It s not about solving algebraic equations or even making a geometric proof These are valuable skills but not evidence of literacy We often seek answers but learning to ask pertinent questions is the road to mathematical literacy Here is the good news new mathematical ideas have a way of finding applications This is known as the unreasonable effectiveness of mathematics
