A Political Economy of Contemporary

Capitalism and its Crisis Dimitris Sotiropoulos,John Milios,Spyros Lapatsioras,2013-06-19 The recent financial meltdown and the resulting global recession have rekindled debates regarding the nature of contemporary capitalism This book analyses the ongoing financialization of the economy as a development within capitalism and explores the ways in which it has changed the organization of capitalist power The authors offer an interpretation of the role of the financial sphere which displays a striking contrast to the majority of contemporary heterodox approaches Their interpretation stresses the crucial role of financial derivatives in the contemporary organization of capitalist power relations arguing that the process of financialization is in fact entirely unthinkable in the absence of derivatives The book also uses Marx s concepts and some of the arguments developed in the framework of the historic Marxist controversies on economic crises in order to gain an insight into the modern neoliberal form of capitalism and the recent financial crisis Employing a series of international case studies this book will be essential reading for all those with an interest in the financial crisis and all those seeking to comprehend the workings of capitalism

Socio-Religious Revolution in India Pankaj Jain,2016-12-19 Scholars have long noticed a discrepancy in the way non Western and Western peoples conceptualize the scientific and religious worlds Non Western traditions and communities such as of India are better positioned to provide an alternative to the Western dualistic thinking of separating science and religion The Himalayan Environmental Studies and Conservation Organization HESCO was founded by Dr Anil Joshi in the 1970s as a new movement looking at the economic and development needs of rural villages in the Indian Himalayas and encouraging them to use local resources in order to open up new avenues to self reliance This thoroughly revised text argues that the concept of dharma the law that supports the regulatory order of the universe in Indian culture can be applied as an overarching term for HESCO s socio economic work This book presents the social environmental work in contemporary India by Dr Anil Joshi in the Himalayas and by Baba Seechewal in Punjab combining the ideas of traditional and scientific ecological knowledge systems Based on these two examples the book presents the holistic model transcending the dichotomies of nature vs culture and science vs religion especially as practiced and utilized in the non Western society such as India Using the example of HESCO the book highlights that the very categories of religion and science are problematic when applied to non Western traditions but that Western technologies can be radically transformed through integration with regional legacies to enable the flourishing of a multiplicity of knowledge traditions and the societies that depend upon them It will be of interest to students and scholars of South Asian Studies Religion Environmental Studies Himalayan Studies and Development Studies **Building Something Better** Stephanie A. that it is possible to challenge social inequality and environmental degradation by refusing to continue business as usual Building Something Better shares vivid case studies of small groups who are making a big impact by crafting alternatives to neoliberal capitalism It offers both a call to action and a dose of hope in these troubled times *The Soils of the Philippines* Rodelio B. Carating,Raymundo G. Galanta,Clarita D. Bacatio,2014-04-23 The first soil survey in the Philippines was done by

Mr Clarence Dorsey an American soil scientist in the province of Batangas in 1903 The Soils of the Philippines however is the first comprehensive summary of more than a century of soil survey work in this country It integrates the soil concepts of the reconnaissance soil survey results which commenced as early as 1934 and continued until the mid 1960s with the semi detailed soil surveys that continue to this day The result is the first ever genetic key for classifying Philippine soils at soil series level thus making it possible for any newcomers to the soil survey field to confidently produce their own soil map at a more detailed map scale to suit the project requirements This book brings together discussions on soils and soil mapping units and up to date international techniques and technologies It makes soils relevant to current political realities and national issues As soil survey moves from a reductionist agricultural development planning tool to a more holistic and integrated approach to enable us to understand our dynamic and complex environment The Soils of the Philippines will be the only source of authoritative and updated data on soil resources for macro level resource management planning for decades to come With a vanishing breed of experienced soil surveyors not only in the Philippines but also worldwide it may remain the only book on Philippine soils for the next hundred years or more Since soils follow a geological and not a human time frame the contents of this volume will stay relevant for soil surveyors even in a fast changing world As the country leaps from an agricultural economy towards modernization and a more diversified economic base some of the soil series in the Philippines for example the Guadalupe series underlying the skyscrapers of Makati City are becoming extinct as a result of urban development Therefore this book serves as the repository for the soils that we possess the soils that have been lost through decades of urbanization while at the same time it creates a soil classification system for the soils we are yet to discover

Living within a Fair Share Ecological Footprint Robert Vale,Brenda Vale,2013-09-02 According to many authorities the impact of

humanity on the earth is already overshooting the earth's capacity to supply humanity's needs. This is an unsustainable position. This book does not focus on the problem but on the solution by showing what it is like to live within a fair earth share ecological footprint. The authors describe numerical methods used to calculate this, concentrating on low or no cost behaviour change rather than on potentially expensive technological innovation. They show what people need to do now in regions where their current lifestyle means they are living beyond their ecological means, such as in Europe, North America and Australasia. The calculations focus on outcomes rather than on detailed discussion of the methods used. The main objective is to show that living with a reduced ecological footprint is both possible and not so very different from the way most people currently live in the west. The book clearly demonstrates that change in behaviour now will avoid some very challenging problems in the future. The emphasis is on workable, practical and sustainable solutions based on quantified research rather than on generalities about overall problems facing humanity.

Building Futures Jane Powell, Jennifer Monahan, Chris Foulds, 2015-11-24. A reduction in the energy demand of buildings can make a major contribution to achieving national and international carbon reduction goals in addition to addressing the interlinked issues of sustainable development, fuel poverty and fuel security. Despite improvements in thermal efficiency, the energy demand of buildings stubbornly remains unchanged or is only declining slowly due to the challenges posed by growing populations, the expectations of larger, more comfortable and better equipped living spaces and an expanding commercial sector. *Building Futures* offers an interdisciplinary approach to explore this lack of progress, combining technical and social insights into the challenges of designing, constructing and operating new low energy buildings as well as improving the existing inefficient building stock. The twin roles of energy efficiency, which is predominantly concerned with technological solutions and energy conservation, which involves changing people's behaviour, are both explored. The book includes a broad geographical range and scale of case studies from the UK, Europe and further afield, including Passivhaus in Germany and the UK Dongtan Eco City in China and retrofit houses in Denmark. This book is a valuable resource for students and academics of environmental science and energy based subjects, as well as construction and building management professionals.

Mathematical Geoenergy Paul Pukite, Dennis Coyne, Daniel Challou, 2018-11-28. A rigorous mathematical problem solving framework for analyzing the Earth's energy resources. GeoEnergy encompasses the range of energy technologies and sources that interact with the geological subsurface. Fossil fuel availability studies have historically lacked concise modeling, tending instead toward heuristics and overly complex processes. *Mathematical GeoEnergy: Oil Discovery, Depletion and Renewal* details leading edge research based on a mathematically oriented approach to geoenergy analysis. Volume highlights include: Applies a formal mathematical framework to oil discovery, depletion and analysis; Employs first order applied physics modeling, decreasing computational resource requirements; Illustrates model interpolation and extrapolation to fill out missing or indeterminate data; Covers both stochastic and deterministic mathematical processes for historical analysis and prediction; Emphasizes the importance of up
