Commerce, Justice, Science, and Related Agencies Appropriations for 2014 United States. Congress. House. Committee on Appropriations. Subcommittee on Commerce, Justice, Science, and Related Agencies, 2013 Science Education in Canada Christine D. Tippet, Todd M. Milford, 2019-07-01 This book offers a meso level description of demographics science education and science teacher education Representing all 13 Canadian jurisdictions the book provides local insights that serve as the basis for exploring the Canadian system as a whole and function as a common starting point from which to identify causal relationships that may be associated with Canada's successes The book highlights commonalities consistencies and distinctions across the provinces and territories in a thematic analysis of the 13 jurisdiction specific chapters Although the analysis indicates a network of policy and practice issues warranting further consideration the diverse nature of Canadian science education makes simple identification of causal relationships elusive Canada has a reputation for strong science achievement However there is currently limited literature on science education in Canada at the general level or in specific areas such as Canadian science curriculum or science teacher education This book fills that gap by presenting a thorough description of science education at the provincial territorial level as well as a more holistic description of pressing issues for Canadian science education

Quantum Mind and Social Science Alexander Wendt, 2015-04-20 There is an underlying assumption in the social sciences that consciousness and social life are ultimately classical physical material phenomena In this ground breaking book Alexander Wendt challenges this assumption by proposing that consciousness is in fact a macroscopic quantum mechanical phenomenon In the first half of the book Wendt justifies the insertion of quantum theory into social scientific debates introduces social scientists to quantum theory and the philosophical controversy about its interpretation and then defends the quantum consciousness hypothesis against the orthodox classical approach to the mind body problem In the second half he develops the implications of this metaphysical perspective for the nature of language and the agent structure problem in social ontology Wendt's argument is a revolutionary development which raises fundamental questions about the nature of social life and the work of those who study it

In the Shadow of the Machine Jeremy Naydler, 2018-05-29 Contemporary life is so deeply reliant upon digital technology that the computer has come to dominate almost every aspect of our culture What is the philosophical and spiritual significance of this dependence on electronic technology both for our relationship to nature and for the future of humanity And what processes in human perception and awareness have produced the situation we find ourselves in As Jeremy Naydler elucidates in this penetrating study we cannot understand the emergence of the computer without seeing it within the wider context of the evolution of human consciousness which has taken place over millennia Modern consciousness he shows has evolved in conjunction with the development of machines and under their intensifying shadow The computer was the product of a long historical development culminating in the scientific revolution of the 17th century It was during this period that the first mechanical

calculators were invented and the project to create more complex thinking machines began in earnest But the seeds were sown many hundreds of years earlier deep in antiquity Naydler paints a vast panorama depicting human development and the emergence of electronic technology His painstaking research illuminates an urgent question that concerns every living person today What does it mean to be human and what if anything distinguishes us from machines *DHM and Posturography* Sofia Scataglini, Gunther Paul, 2019-08-22 DHM and Posturography explores the body of knowledge and state of the art in digital human modeling along with its application in ergonomics and posturography The book provides an industry first introductory and practitioner focused overview of human simulation tools with detailed chapters describing elements of posture postural interactions and fields of application Thus DHM tools and a specific scientific practical problem the study of posture are linked in a coherent framework In addition sections show how DHM interfaces with the most common physical devices for posture analysis Case studies provide the applied knowledge necessary for practitioners to make informed decisions Digital Human Modelling is the science of representing humans with their physical properties characteristics and behaviors in computerized virtual models These models can be used standalone or integrated with other computerized object design systems to design or study designs workplaces or products in their relationship with humans Presents an introductory up to date overview and introduction to all industrially relevant DHM systems that will enable users on trialing procurement decisions and initial applications Includes user level examples and case studies of DHM application in various industrial fields Provides a structured and posturography focused compendium that is easy to access read and understand **Modes of Explanation** M. Stepping Away from the Silos Margaret Coutts, 2016-11-10 For over twenty years digitisation has been a core element of the modern information landscape The digital lifecycle is now well defined and standards and good practice have been developed for most of its key stages There remains however a widespread lack of coordination of digitisation initiatives both within and across different sectors and there are disparate approaches to selection criteria The result is silos of digitised content Stepping away from the Silos examines the strategic context in the UK since the 1990s and its effect on collaboration and coordination of exemplar digitisation initiatives in higher education and related sectors It identifies the principal criteria for content selection that are common to the international literature in this field The outputs of the exemplar projects are examined in relation to these criteria A range of common practices and patterns in content selection appears to have developed over time forming a de facto strategy from which several areas of critical mass have emerged The book discusses the potential to improve strategic collaboration and coordinated selection by building on such a platform and considers planning options in the context of work on national digitisation strategies in the UK and internationally Summarises the rise of publicly funded digitisation in the UK from the 1990s to date and identifies the need to improve coordination and content selection criteria Reviews the role of digitisation in government and organisational strategies from the 1990s to the present day Examines the strategic position of collaboration within and across different organisations Identifies common selection criteria and outlines the coverage of exemplar projects Discusses the apparent emergence of a de facto selection strategy and the potential for national strategic

planning of digitised content based on existing outputs and improved collaboration
