*Epidemiology and the Delivery of Health Care Services* Denise M. Oleske,2007-05-08 In the previous edition of this book the predominant theme was applying epidemiology to assist managers in dealing with an environment in which the structure of health care financing was rapidly changing to managed care and in which there was increasing competition among health care providers While these phenomena continue to exist new challenges have emerged and in particular the explosion of information technology has given way to a global society and decision making that is increasingly shared with consumers because of their access to the same sets of data Thus the questions with which health care managers are confronted on a daily basis are now exceedingly more complex 1 How can a population be defined considering that both exposures and diseases originating in one corner of the globe can rapidly become a threat to any nation s security 2 Where do influences on

a population begin and end 3 How can we protect and promote health in that population or any population if privacy is preeminent This edition brings in this editor's view of the increasing need for health care managers be they in private or public settings to use epidemiological concepts and methods The challenges posed by health care delivery in the 21st century are immense ranging from redefining life and health given the advances in genetic technology global environmental changes and multinational simultaneous increases in poverty and longevity to economic decisions regarding technology and service levels that fewer and fewer can afford The Engineer, 1862 Popular Science, 1975-01 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better

Meister, 2014-06-28 Human factors measurement has characteristics that set it apart from psychological or engineering measurement and for that reason human factors testing and evaluation deserves special treatment The many excellent texts available in the behavioral area do not give an adequate picture of this topic and this is particularly unfortunate because testing and evaluation T based on his past experience in system testing the author recognizes the difficulties that occur in testing and indicates how these may be overcome or minimized Special attention has been paid to the context in which T workload and training effectiveness testing Special attention is also paid to environmental testing e.g. temperature lighting noise vibration etc One chapter reviews all the relevant T E literature including government documents that may not be readily available to the general reader As part of the preparation for writing this text a survey was made of 45 distinguished T E specialists in order to determine their characteristic T E practices The book will be useful not only to the human factors professional who specializes in T E but to all students and practitioners interested in human factors and work measurement
