skills and digital competences. Consequently many education scholars have argued that teaching technology to young children is vital in keeping up with 21st century employment patterns. Technologies such as those that involve robotics or coding apps come at a time when the demand for computing jobs around the globe is at an all time high while its supply is at an all time low. There is no doubt that coding with robotics is a wonderful tool for learners of all ages as it provides a catalyst to introduce them to computational thinking, algorithmic thinking and project management. Additionally recent studies argue that the use of a developmentally appropriate robotics curriculum can help to change negative stereotypes and ideas children may initially have about technology and engineering. *The Handbook of Research on Using Educational Robotics to Facilitate Student Learning* is an edited book that advocates for a new approach to computational thinking and computing education with the use of educational robotics and coding apps. The book argues that while learning about computing young people should also have opportunities to create with computing which have a direct impact on their lives and their communities. It develops two key dimensions for understanding and developing educational experiences that support students in engaging in computational action: 1. computational identity which shows the importance of young people's development of scientific identity for future STEM growth and 2. digital empowerment to instill the belief that they can put their computational identity into action in authentic and meaningful ways. Covering subthemes including student competency and assessment, programming education and teacher and mentor development, this book is ideal for teachers, instructional designers, educational technology developers, school administrators, academicians, researchers and students. *Small Spacecraft Development: Project-Based Learning* Jeremy Straub, Ronald Arthur Marsh, David J. Whalen, 2017-02-07. This book provides the information that is required to start a small spacecraft program for educational purposes. This will include a discussion of multiple approaches to program formation and build buy hybrid decision considerations. The book also discusses how a CubeSat or other small spacecraft program can be integrated into course and/or program curriculum and the ancillary benefits that such a program can provide. The assessment of small spacecraft programs and participatory project based learning programs is also discussed extensively. The book presents prior work related to program assessment both for a single program and internationally and discusses how similar techniques can be utilized for both formative and summative assessment of a new program. The utility of these metrics and past assessment of other programs in gaining buy in for program formation and funding is also considered. **Handbook of Research on Educational Technology Integration and Active Learning** Keengwe, Jared, 2015-05-31. As today's teachers prepare to instruct a new generation of students the question is no longer whether technology should be integrated into the classroom but only how. Forced to combat shorter attention spans and an excess of stimuli teachers sometimes see technology as a threat rather than a potential enhancement to traditional teaching methods. *The Handbook of Research on Educational Technology Integration and Active Learning* explores the need for new professional development opportunities for teachers and educators as they utilize emerging

technologies to enhance the learning experience Highlighting the advancements of ubiquitous computing authentic learning and student centered instruction this book is an essential reference source for educators academics students researchers and librarians **Human-Computer Interaction: Concepts, Methodologies, Tools, and Applications** Management
