Polymerase Chain Reaction

Synopsis

In this Polymerase Chain Reaction (PCR) simulation, you will see through eight easy-to-understand scenes how to introduce DNA target, primer, to investigate the target, amplify and finally test it. In the end, you will observe the results that the target sequence will be amplified or not.

Design and

After sampling, you will go to the PCR laboratory. In this lab, the sample of DNA you collected by using a microtube is thermocycled, and this amplification from the initial sample is used to give the test that detects specific abnormalities that PCR amplification.

How the structure of DNA results amplification up three

In the simulation, you will see the PCR amplification on the computer lab, illustrating the structure of DNA and the amplification that includes all the steps involved in the PCR amplification process, as well as all the functions of the PCR itself.

Identify the materials

In the PCR simulation, you will collect your sample and other material samples from the laboratory and use them to prepare the PCR reaction for analysis.

Learning Objectives

In the end of this simulation, you will be able to:

1. Identify the function of each PCR material, primer amplification and synthesis.
2. Explain the PCR amplification using the results of PCR reaction on the computer.
