Jr. Murray, 2013-07-22 Population Dynamics Alternative Models provides a theoretical framework of population dynamics This book contains seven chapters that discuss the controversies surrounding discussions on the explicit view of the subject Chapters 1 and 2 present a general introduction to the terminology the mathematical background and the philosophical approach that lie behind the theoretical development Chapter 3 contains a series of models accounting for variations in population growth rates sizes and fluctuations while Chapter 4 examines a model accounting for the evolution of life history patterns A more detailed examination of the effects of predation on prey populations especially with respect to determining a prey population's maximum sustainable yield is explored in Chapter 5 Chapter 6 highlights the interspecific competition theory in terms of the population dynamics models presented in a previous chapter Chapter 7 summarizes the developments in the population dynamics research studies This work will be of great value to ecologists biologists and population dynamics researchers **Population dynamics; proceedings** Symposium on Population Dynamics, Mathematics Research Center, 1972, Population Dynamics in Variable Environments Shripad Tuljapurkar, 1985 Population Dynamics and the Tribolium Model: Genetics and Demography Robert F. Costantino, Robert A. Desharnais, 2011-09-17 The study of populations is becoming increasingly focused on dynamics We believe there are two reasons for this trend The first is the impact of nonlinear dynamics with its exciting ideas and colorful language bifurcations domains of attraction chaos fractals strange attractors Complexity which is so very much a part of biology now seems to be also a part of mathematics A second trend is the accessibility of the new concepts The barriers to communication between theorist and experimentalist seem impenetrable The active participation of the experimentalist means that the theory will obtain substance Our role is the application of the theory of dynamics to the analysis of biological populations We began our work early in 1979 by writing an ordinary differential equation for the rate of change in adult numbers which was based on an equilibrium model proposed a decade earlier During the next few months we filled our notebooks with straightforward deductions from the model and its associated biological implications Slowly some of the biological observations were explained and papers followed on a variety of topics genetic and demographic stability stationary probability distributions for population size population growth as a birth death process natural selection and density dependent population growth genetic disequilibrium and the stationary stochastic dynamics of adult numbers Population Dynamics and the Tribolium Model Robert F Costantino, Robert A Desharnais, 1991-08-01 Population Dynamics: Algebraic and Probabilistic Approach Utkir A. Rozikov, 2020 The book contains a very popular topic since the number of young scientists interested in dynamical systems is increasing as there are a multitude of applications in biology mathematics medicine and physics It is the first ever book published in English on this topic The book contains results of many recent papers related to population dynamics *Population Dynamics* Johannes

Theory of Populations Alexandr N Tetearing, 2016-11-29 The book is devoted to the theory of development of the biological systems The fundamental equation of life of a biological population based on the general physical principles allows us to get all the basic equations of population dynamics describing the development of the populations under various environmental conditions The equations describe the population transition that occurred in our human population in the late 20 th century This transition may indicate the fact that the human population consists of two super races the old slow race and new fast growing human race that appeared on Earth relatively recently The separate chapter presents the base classification of predator prey systems The classification consists of ninety six different equation systems The book is addressed to a broad auditorium of biologists ecologists and demographers as well as readers interested in the development of the biological populations Translated from Russian
