Technologies for Prospecting, Extraction, and Utilization of Space Resources Paul Zabel, Philipp

Reiss,Angel Abbud-Madrid,Beth Lomax,Florian Kehl, Valentin T. Bickel,Hendrik Kolvenbach,Philip Arm ,Gabriela Ligeza,2024-11-18 Sustainable exploration of the solar system requires a large amount of material and propellant to be transported out of Earth's gravity well and onwards to their destination Despite recent advances in lowering launch costs transferring material from Earth to space is still very costly It still amounts to several thousand to tens of thousands of Euros per kilogram to low earth orbit and transportation to the Moon and Mars even a multiple of that There is an abundance of resources in our solar system that can be utilized to reduce the material required to be launched from Earth significantly Among these resources are water ice hydrates metals regolith rare earth elements chemical compounds volatiles and rare isotopes Utilizing these space resources would enable e.g consumable and propellant production in space manufacturing or the construction of large structures which would otherwise be very expensive or not possible at all with material launched from Earth Lunar regolith for example contains iron and titanium that could be used to produce spacecraft components or structural elements for a lunar base while oxygen released from oxide minerals could be used for respiration or as a propellant In addition water ice could be extracted from regolith and used for consumption or agricultural applications Although there have been numerous missions to the Moon there are still a lot of unknowns concerning its surface making it difficult to know where to look for resources and how to extract them

Artificial Intelligence in the Capitalist

University John Preston,2021-10-31 Using Marxist critique this book explores manifestations of Artificial Intelligence AI in Higher Education and demonstrates how it contributes to the functioning and existence of the capitalist university Challenging the idea that AI is a break from previous capitalist technologies the book offers nuanced examination of the impacts of AI on the control and regulation of academic work and labour on digital learning and remote teaching and on the value of learning and knowledge Applying a Marxist perspective Preston argues that commodity fetishism surveillance and increasing productivity ushered in by the growth of AI further alienates and exploits academic labour and commodifies learning and research The text puts forward a solid theoretical framework and methodology for thinking about AI to inform critical and revolutionary pedagogies Offering an impactful and timely analysis this book provides a critical engagement and application of key Marxist concepts in the study of AI's role in Higher Education It will be of interest to those working or researching in Higher Education

Bio-prospecting of Novel Microbial Bioactive Compounds for Sustainable

Development Kartika Sharma,2025-04-26 This book discusses current developments and upcoming trends in the microbial synthesis of various bioactive compounds from waste product which have a very good market worldwide The extraction of biologically active compounds from microorganisms is still essential for the creation of novel pharmaceuticals and agricultural chemicals and has underpinned their application as drugs and functional food ingredients The demand of pharmaceuticals nutraceuticals and agrochemicals is rising globally for the multi billion dollar market of human disease prevention and treatment However the limitations and issues associated with the extraction of these bioactive compounds

from natural resources such as plants animals or fungi limit the large scale use of pharmaceuticals nutraceuticals and agrochemicals The microbial production of agrochemicals nutraceuticals and pharmaceuticals by utilizing waste product is now thought to be an environmentally benign process The major goal of this book is to draw attention to excellent original research and review articles that contain cutting edge characterization techniques and novel bioactive chemicals production that make important contributions to the field with many prospective applications In this book the potential for using microbial bioactive compounds which have positive health effects in their entirety is highlighted This book is written by eminent scientists from around the world and seasoned researchers thoroughly discusses current developments and patterns in the microbial synthesis of bioactive compounds Academicians scientists researchers graduate and post graduate students who work in the highly dynamic and competitive fields of pharmaceuticals nutraceuticals and agrochemicals discovery will find this book to be ideal
